Table of Contents: M.Sc. in Physics (PO von 2014)

physics601 Advanced Laboratory Course	1
physics601 Advanced Laboratory Course	2
ECThPhysics Elective Courses Theoretical Physics	3
physics606 Advanced Quantum Theory	4
physics751 Group Theory (T)	5
physics754 General Relativity and Cosmology (T)	6
physics755 Quantum Field Theory (T)	7
physics760 Computational Physics (T)	8
physics7501 Advanced Quantum Field Theory (T)	9
physics61a Specialization: Experimental Physics	10
physics611 Particle Physics	11
physics612 Accelerator Physics	12
physics618 Physics of Particle Detectors	13
physics613 Condensed Matter Physics	14
Condensed Matter Physics I	15
physics614 Laser Physics and Nonlinear Optics	16
physics620 Advanced Atomic, Molecular, and Optical Physics	17
Molecular Physics I	18
physics62a Specialization: Advanced Experimental Physics	19
physics632 Physics of Hadrons	20
physics633 High Energy Collider Physics	21
physics639 Advanced Topics in High Energy Particle Physics	22
physics631 Quantum Optics	23
physics634 Magnetism/Superconductivity	24
physics640 Photonic Devices	25
Molecular Physics II	26
physics61b Specialization: Applied Physics	27
physics62b Specialization: Advanced Applied Physics	28
physics61c Specialization: Theoretical Physics	29
physics615 Theoretical Particle Physics	30
physics616 Theoretical Hadron Physics	31
physics617 Theoretical Condensed Matter Physics	32
Solid State Theory I	33
physics62c Specialization: Advanced Theoretical Physics	34
physics636 Advanced Theoretical Particle Physics	35
physics637 Advanced Theoretical Hadron Physics	36
physics638 Advanced Theoretical Condensed Matter Physics	37
physics65a Seminar: Experimental Physics	38
physics65b Seminar: Applied Physics	39
physics65c Seminar: Theoretical Physics	40
physics70a Elective Advanced Lectures: Experimental Physics	41
physics711 Particle Astrophysics and Cosmology (E)	42
physics712 Advanced Electronics and Signal Processing (E/A)	43
physics713 Particle Detectors and Instrumentation (E/A)	44
physics714 Advanced Accelerator Physics (E/A)	45
physics715 Experiments on the Structure of Hadrons (E)	46
physics716 Statistical Methods of Data Analysis (E)	47
physics717 High Energy Physics Lab (E)	48

physics718 C++ Programming in High Energy Physics (E/A)	49
physics719 Intensive Week: Advanced Topics in High Energy Physics (E).....	50
physics720 Physics with Antiprotons (E)	51
physics721 Intensive Week: Advanced Topics in Hadron Physics (E).....	52
physics722 Advanced Gaseous Detectors - Theory and Practice (E).....	53
physics731 Low Temperature Physics (E/A)	54
physics732 Optics Lab (E/A)	55
physics734 Holography (E/A)	56
physics735 Laser Cooling and Matter Waves (E).....	57
physics736 Crystal Optics (E/A)	58
physics737 Intensive Week: Advanced Topics in Photonics and Quantum Optics (E)	59
physics738 Lecture on Advanced Topics in Quantum Optics (E).....	60
physics739 Lecture on Advanced Topics in Photonics (E/A)	61
physics740 Hands-on Seminar: Experimental Optics and Atomic Physics (E/A)	62
physics741 Modern Spectroscopy (E/A).....	63
physics742 Ultracold Atomic Gases (E/T)	64
physics799 Internships in the Research Groups	65
physics70b Elective Advanced Lectures: Applied Physics	66
physics712 Advanced Electronics and Signal Processing (E/A)	67
physics713 Particle Detectors and Instrumentation (E/A)	68
physics714 Advanced Accelerator Physics (E/A)	69
physics718 C++ Programming in High Energy Physics (E/A)	70
physics731 Low Temperature Physics (E/A)	71
physics732 Optics Lab (E/A)	72
physics734 Holography (E/A)	73
physics736 Crystal Optics (E/A)	74
physics739 Lecture on Advanced Topics in Photonics (E/A)	75
physics740 Hands-on Seminar: Experimental Optics and Atomic Physics (E/A)	76
physics741 Modern Spectroscopy (E/A).....	77
physics771 Environmental Physics & Energy Physics (A)	78
physics772 Physics in Medicine: Fundamentals of Analyzing Biomedical Signals (A).....	79
physics773 Physics in Medicine: Fundamentals of Medical Imaging (A)	80
physics774 Electronics for Physicists (E/A).....	81
physics775 Nuclear Reactor Physics (A).....	82
physics776 Physics in Medicine: Physics of Magnetic Resonance Imaging (A)	83
physics799 Internships in the Research Groups	84
physics70c Elective Advanced Lectures: Theoretical Physics	85
physics742 Ultracold Atomic Gases (E/T)	86
physics751 Group Theory (T)	87
physics752 Superstring Theory (T).....	88
physics753 Theoretical Particle Astrophysics (T)	89
physics754 General Relativity and Cosmology (T).....	90
physics755 Quantum Field Theory (T)	91
physics756 Critical Phenomena (T).....	92
physics757 Effective Field Theory (T)	93
physics758 Quantum Chromodynamics (T)	94
physics759 Quantum Field Theory for Condensed Matter Physics (T)	95
physics760 Computational Physics (T).....	96
physics761 Supersymmetry (T)	97
physics762 Transport in mesoscopic systems (T).....	98
physics763 Advanced Topics in String Theory (T)	99

physics764 Advanced Topics in Field and String Theory (T)	100
physics765 Advanced Topics in Quantum Field Theory (T)	101
physics766 Physics of Higgs Bosons (T).....	102
physics767 Computational Methods in Condensed Matter Theory (T).....	103
physics768 General Relativity for Experimentalists (T)	104
physics769 Lattice QCD (T).....	105
physics7501 Advanced Quantum Field Theory (T)	106
physics7502 Random Walks and Diffusion (T).....	107
physics7503 Selected Topics in Modern Condensed Matter Theory (T).....	108
physics7504 Theory of Superconductivity and Superfluidity (T).....	109
physics799 Internships in the Research Groups	110
physics70d Elective Advanced Lectures: BCGS Courses	111
Relativity and Cosmology I (T).....	112
Relativity and Cosmology II (T).....	113
Quantum Field Theory I (T)	114
Quantum Field Theory II (T)	115
Geometry in Physics (T)	116
Topology for Physicists (T)	117
Nuclear physics II (E).....	118
Physics of Detectors (E/A).....	119
Particle physics (E)	120
Groundbreaking experiments in nuclear physics (E)	121
Condensed Matter Physics II (E)	122
Semiconductor Physics and Nanoscience (E/A)	123
Superconductivity (E/A)	124
Magnetism (E/A).....	125
Experimental methods in condensed matter physics (E/A)	126
Physics of Surfaces and Nanostructures (E/A).....	127
Introduction to neutron scattering (E/A)	128
Optical Spectroscopy (E/A).....	129
Astrochemistry (E/A).....	130
Fundamentals of Molecular Symmetry (E/A/T).....	131
Physical biology (T/A)	132
Statistical physics of soft matter and biomolecules (T/A)	133
Statistical physics far from equilibrium (T)	134
Disordered systems (T)	135
Nonequilibrium physics with interdisciplinary applications (T)	136
Probability theory and stochastic processes for physicists (T)	137
physics910 Scientific Exploration of the Master Thesis Topic	138
physics920 Methods and Project Planning	139
physics930 Master Thesis	140

Module No.: physics601
 Credit Points (CP): 7
 Category: Required
 Semester: 1.

Module: Advanced Laboratory Course

Module Elements:

Nr.	Course Title	Number	CP	Type	Workload	Sem.
1.	Advanced Laboratory Course	physics601	7	Laboratory	210 hrs	WT/ST

Requirements for Participation:

Form of Examination:

written report for every laboratory

Content:

Every student has to complete this Laboratory Course. The course consists of advanced experiments introducing into important subfields of contemporary experimental physics and astrophysics. The lab-course is accompanied by a seminar.

Aims/Skills:

The students shall gain insight in the conceptual and complex properties of relevant contemporary experiments. The students gain experience in setting up an experiment, data logging and data analysis. They experience the intricacies of forefront experimental research

Course achievement/Criteria for awarding cp's:

Before carrying out an experiment, the students shall demonstrate to have acquired the necessary preparatory knowledge. Experiments are selected from the catalogue of laboratory set-ups offered. Cumulative lab-units of ≥ 9 are required.

Requirements for the examination (written report for every laboratory): successful completion of the experiment and initial oral questioning plus seminar talk

Length of Module: 1 semester

Maximum Number of Participants: ca. 100

Registration Procedure:

s. <https://basis.uni-bonn.de> u. <http://bamawww.physik.uni-bonn.de>

Module: Advanced Laboratory Course

Module No.: physics601

**Course: Advanced Laboratory Course**

Course No.: physics601

Category	Type	Language	Teaching hours	CP	Semester
Required	Laboratory	English	3+2	7	WT/ST

Requirements for Participation:

Requirement for experiment 12 is astro800 Introduction to Astrophysics or an equivalent basic knowledge in astrophysics.

Preparation:

Recommended for experiment 13 is lecture astro841 Radio Astronomy: Tools, Applications, Impacts

Form of Testing and Examination:

Experiments are selected from the catalogue of laboratory set-ups offered. 9 cumulative lab-units (LU) are required. One of the experiments 1-3 is compulsory for physics students. The experiments 12-14 are compulsory for astrophysics students. Requirements for the module examination (written report for every laboratory): successful completion of the experiment and initial oral questioning

Length of Course:

1 semester

Aims of the Course:

The student shall gain insight in the intricate workings of physics in relevant advanced experiments. The student gains experience in the setting up of a proper experimental environment and experiences the intricacies of forefront experimental research and presenting his/her results.

Contents of the Course:

Advanced experiments are carried out. Experimenting time in units of 8 hrs, preparation time and report writing each ~15 hrs. Further details are listed in the catalogue of laboratories. The experiments are chosen among those being offered and after consultation with the head of the course.

In the accompanying seminar the students report about one experiment. This experiment will be selected after consultation with the head of the course.

Recommended Literature:

Hand outs and literature will be distributed with the registration for an experiment

Catalogue of laboratories: (subject to change, for an up to date catalogue see <http://www.praktika.physik.uni-bonn.de/module/physics601>)

1. Properties of Elementary Particles (Bubble Chamber events): 3 LU
2. Analysis of Decays of Heavy Vector Boson Z0: 3 LU
3. Atlas: 3 LU
4. Holography: 2 LU
5. Photovoltaic and Fuel Cell: 2 LU
6. Optical frequency doubling: 2 LU
7. Laser Spectroscopy: 2 LU
8. Photonic Crystals: 2 LU
9. Mößbauer-Effect: 1 LU
10. Nuclear Gamma-Gamma Angular Correlations: 1 LU
11. Beta+-Annihilation: 1 LU
12. Optical Astronomy: 3 LU
13. Wave propagation on coaxial cables and waveguides / Setup of a radio-astronomical receiver: 2 LU
14. Photometry of stars: 2 LU

Module: Elective Courses Theoretical Physics

Module Elements:

Nr.	Course Title	Number	CP	Type	Workload	Sem.
1.	Advanced Quantum Theory	physics606	7	Lect. + ex.	210 hrs	WT
2.	Group Theory (T)	physics751	7	Lect. + ex.	210 hrs	WT
3.	General Relativity and Cosmology (T)	physics754	7	Lect. + ex.	210 hrs	ST
4.	Quantum Field Theory (T)	physics755	7	Lect. + ex.	210 hrs	ST
5.	Computational Physics (T)	physics760	7	Lect. + ex. + proj.	210 hrs	WT/ST
6.	Advanced Quantum Field Theory (T)	physics7501	7	Lect. + ex.	210 hrs	WT

Requirements for Participation:

for physics606: none

for all other modules: physics606

Form of Examination:

written examination

Content:

see with the course

Aims/Skills:

see with the course

Course achievement/Criteria for awarding cp's:

successful work with the exercises

Length of Module: 1 semester

Maximum Number of Participants: ca. 100

Registration Procedure:

s. <https://basis.uni-bonn.de> u. <http://bamawww.physik.uni-bonn.de>

at least 7 cp out of this area must be achieved

Module:	Elective Courses Theoretical Physics
----------------	---

Module No.: ECThPhysics

Course:	 Advanced Quantum Theory
----------------	--

Course No.: physics606

Category	Type	Language	Teaching hours	CP	Semester
Required	Lecture with exercises	English	3+2	7	WT

Requirements for Participation:
--

Preparation:

Theoretical courses at the Bachelor degree level
--

Form of Testing and Examination:

Requirements for the module examination (written examination): successful work with exercises

Length of Course:

1 semester

Aims of the Course:

Ability to solve problems in relativistic quantum mechanics, scattering theory and many-particle theory

Contents of the Course:

Born approximation, partial waves, resonances
 advanced scattering theory: S-matrix, Lippman-Schwinger equation
 relativistic wave equations: Klein-Gordon equation, Dirac equation
 representations of the Lorentz group
 many body theory
 second quantization
 basics of quantum field theory
 path integral formalism
 Greens functions, propagator theory

Recommended Literature:

L. D. Landau, E.M. Lifschitz; Course of Theoretical Physics Vol.3 Quantum Mechanics (Butterworth-Heinemann 1997)

J. J. Sakurai, Modern Quantum Mechanics (Addison-Wesley 1995)

F. Schwabl, Advanced Quantum Mechanics. (Springer, Heidelberg 3rd Ed. 2005)

Modules: ECThPhysics **Elective Courses Theoretical Physics**
 physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:  **Group Theory (T)**

Course No.: physics751

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	WT

Requirements for Participation:

Preparation:

physik421 (Quantum Mechanics)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the

Length of Course:

1 semester

Aims of the Course:

Acquisition of mathematical foundations of group theory with regard to applications in theoretical physics

Contents of the Course:

Mathematical foundations:

Finite groups, Lie groups and Lie algebras, highest weight representations, classification of simple Lie algebras, Dynkin diagrams, tensor products and Young tableaux, spinors, Clifford algebras, Lie super algebras

Recommended Literature:

B. G. Wybourne; Classical Groups for Physicists (J. Wiley & Sons 1974)
 H. Georgi; Lie Algebras in Particle Physics (Perseus Books 2. Aufl. 1999)
 W. Fulton, J. Harris; Representation Theory (Springer, New York 1991)

Modules:

ECThPhysics **Elective Courses Theoretical Physics**
 physics70c **Elective Advanced Lectures: Theoretical
 Physics**

Course:

General Relativity and Cosmology (T)

Course No.: physics754

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	ST

Requirements for Participation:**Preparation:**

physik221 and physik321 (Theoretical Physics I and II)
 Differential geometry

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding the general theory of relativity and its cosmological implications

Contents of the Course:

Relativity principle
 Gravitation in relativistic mechanics
 Curvilinear coordinates
 Curvature and energy-momentum tensor
 Einstein-Hilbert action and the equations of the gravitational field
 Black holes
 Gravitational waves
 Time evolution of the universe
 Friedmann-Robertson-Walker solutions

Recommended Literature:

S.Weinberg; Gravitation and Cosmology (J. Wiley & Sons 1972)
 R. Sexl: Gravitation und Kosmologie, Eine Einführung in die Allgemeine Relativitätstheorie (Spektrum Akadem. Verlag 5. Aufl 2002)
 L.D. Landau, E.M. Lifschitz; Course of Theoretical Physics Vol.2: Classical field theory (Butterworth-Heinemann 1995), also available in German from publisher Harry Deutsch

Modules: ECThPhysics **Elective Courses Theoretical Physics**
 physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:  **Quantum Field Theory (T)**

Course No.: physics755

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	ST

Requirements for Participation:

Preparation:

Advanced quantum theory (physics606)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding quantum field theoretical methods, ability to compute processes in quantum electrodynamics (QED) and many particle systems

Contents of the Course:

Classical field theory
 Quantization of free fields
 Path integral formalism
 Perturbation theory
 Methods of regularization: Pauli-Villars, dimensional
 Renormalizability
 Computation of Feynman diagrams
 Transition amplitudes in QED
 Applications in many particle systems

Recommended Literature:

N. N. Bogoliubov, D.V. Shirkov; Introduction to the theory of quantized fields (J. Wiley & Sons 1959)
 M. Kaku, Quantum Field Theory (Oxford University Press 1993)
 M. E. Peskin, D.V. Schroeder; An Introduction to Quantum Field Theory (Harper Collins Publ. 1995)
 L. H. Ryder; Quantum Field Theory (Cambridge University Press 1996)
 S. Weinberg; The Quantum Theory of Fields (Cambridge University Press 1995)

Modules: ECThPhysics **Elective Courses Theoretical Physics**
 physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:  **Computational Physics (T)**

Course No.: physics760

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises and project work	English	2+2+1	7	WT/ST

Requirements for Participation:

Knowledge of a modern programming language (like C, C++)

Preparation:

Theoretical courses at the Bachelor degree level

Form of Testing and Examination:

successful participation in exercises,
 presentation of an independently completed project

Length of Course:

1 semester

Aims of the Course:

ability to apply modern computational methods for solving physics problems

Contents of the Course:

Statistical Models, Likelihood, Bayesian and Bootstrap Methods
 Random Variable Generation
 Stochastic Processes
 Monte-Carlo methods
 Markov-Chain Monte-Carlo

Recommended Literature:

W.H. Press et al.: Numerical Recipes in C (Cambridge University Press)
<http://library.lanl.gov/numerical/index.html>
 C.P. Robert and G. Casella: Monte Carlo Statistical Methods (Springer 2004)
 Tao Pang: An Introduction to Computational Physics (Cambridge University Press)
 Vesely, Franz J.: Computational Physics: An Introduction (Springer)
 Binder, Kurt and Heermann, Dieter W.: Monte Carlo Simulation in Statistical Physics (Springer)
 Fehske, H.; Schneider, R.; Weisse, A.: Computational Many-Particle Physics (Springer)

Modules: ECThPhysics **Elective Courses Theoretical Physics**
 physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:  **Advanced Quantum Field Theory (T)**

Course No.: physics7501

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	WT

Requirements for Participation:

Preparation:

3-year theoretical physics course with extended interest in theoretical physics and mathematics

Form of Testing and Examination:

Requirements for the module examination (written examination): successful work with exercises

Length of Course:

1 semester

Aims of the Course:

Introduction to modern methods and developments in Theoretical Physics in regard to current research

Contents of the Course:

Selected Topics in Modern Theoretical Physics for example:

Anomalies

Solitons and Instantons

Quantum Fluids

Bosonization

Renormalization Group

Bethe Ansatz

Elementary Supersymmetry

Gauge Theories and Differential Forms

Applications of Group Theory

Recommended Literature:

M. Nakahara; Geometry, Topology and Physics (Institute of Physics Publishing, London 2nd Ed. 2003)

R. Rajaraman; Solitons and Instantons, An Introduction to Solitons and Instantons in Quantum Field Theory (North Holland Personal Library, Amsterdam 3rd reprint 2003)

A. M. Tsvelik; Quantum Field Theory in Condensed Matter Physics (Cambridge University Press 2nd Ed. 2003)

A. Zee; Quantum Field Theory in a Nutshell (Princeton University Press 2003)

Course:	 universität bonn	Particle Physics
----------------	---	-------------------------

Course No.: physics611

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT

Requirements for Participation:

Preparation:

Introductory particle physics and quantum mechanics courses

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding of the fundamentals of particle physics: properties of quarks and leptons and their interactions (electromagnetic, weak, strong), experiments that have led to this understanding, the Standard Model of particle physics and measurements that test this model, the structure of hadrons

Contents of the Course:

Basics: leptons and quarks, antiparticles, hadrons, forces / interactions, Feynman graphs, relativistic kinematics, two-body decay, Mandelstam variables, cross-section, lifetime
Symmetries and Conservation Laws. Positronium, Quarkonium. Accelerators and Detectors
Electromagnetic interactions: (g-2) experiments, lepton-nucleon scattering
Strong interactions: colour, gauge principle, experimental tests of QCD. Electroweak interactions and the Standard Model of particle physics: spontaneous symmetry breaking, Higgs mechanism, experimental tests of the Standard Model. Neutrino physics, neutrino oscillations; CP violation

Recommended Literature:

F Halzen, A. Martin; Quarks and Leptons (J. Wiley, Weinheim 1. Aufl. 1984)
C. Berger; Elementarteilchenphysik (Springer, Heidelberg 2. überarb. Aufl. 2006)
Perkins; Introduction to High Energy Physics (Cambridge University Press 4. Aufl. 2000)
D. Griffith; Introduction to Elementary Particle Physics (J. Wiley, Weinheim 1. Aufl. 1987)
A. Seiden; Particle Physics : A Comprehensive Introduction (2005)
Martin & Shaw; Particle Physics, Wiley (2nd edition, 1997)

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding of the functional principle of different types of particle accelerators
 Layout and design of simple magneto-optic systems
 Basic knowledge of radio frequency engineering and technology
 Knowledge of linear beam dynamics in particle accelerators

Contents of the Course:

Elementary overview of different types of particle accelerators: electrostatic and induction accelerators, RFQ, Alvarez, LINAC, Cyclotron, Synchrotron, Microtron
 Subsystems of particle accelerators: particle sources, RF systems, magnets, vacuum systems
 Linear beam optics: equations of motion, matrix formalism, particle beams and phase space
 Circular accelerators: periodic focusing systems, transverse beam dynamics, longitudinal beam dynamics
 Guided tours through the ELSA accelerator of the Physics Institute and excursions to other particle accelerators (COSY, MAMI, HERA, ...) complementing the lecture

Recommended Literature:

F. Hinterberger; Physik der Teilchenbeschleuniger und Ionenoptik (Springer Heidelberg 1997)
 H. Wiedemann; Particle Accelerator Physics (Springer, Heidelberg 2. Aufl. 1999)
 K. Wille; Physik der Teilchenbeschleuniger und Synchrotronstrahlungsquellen (Teubner, Wiesbaden 2. Aufl. 1996)
 D. A. Edwards, M.J. Syphers; An Introduction to the Physics of High Energy Accelerators, Wiley & Sons 1993)

Requirements for Participation:**Preparation:****Form of Testing and Examination:**

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding of the concepts of condensed matter physics

Contents of the Course:

Crystallographic structures: Bravais lattices, Millers indices, crystallographic defects, structural analysis;
 Chemical bonds: van der Waals bond, covalent bond, hybridisation, ionic bond, metallic bond, Hydrogen bridge bond;

Lattice vibrations: acoustic and optical phonons, specific heat, phonon-phonon interaction;

Free electrons in the solid state: free electron gas, Drude model, Fermi distribution, specific heat of the electrons;

Band structure: metals, semiconductors, insulators, effective masses, mobility of charge carrier, pn-transition, basic principles of diodes, bipolar and unipolar transistors;

Superconductivity: basic phenomena, Cooper pairs, BSC-theory and its consequences;

Magnetic properties: diamagnetism, Langevin-theory of paramagnetism, Pauli-paramagnetism, spontaneous magnetic order, molecular field, Heisenberg-exchange;

Nuclear solid state physics: Hyperfine interaction, Mössbauer spectroscopy, perturbed angular correlation, positron annihilation, typical applications.

Module:	Specialization: Experimental Physics
----------------	---

Module No.: physics61a

Course:

Condensed Matter Physics I

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT

Requirements for Participation:

Preparation:

Basic knowledge in condensed matter physics and quantum mechanics

Form of Testing and Examination:

Oral or written examination

Length of Course:

2 semesters

Aims of the Course:

Comprehensive introduction to the basic principles of solid state physics and to some experimental methods. Examples of current research will be discussed.

Contents of the Course:

The entire course (Condensed Matter I & II, given in 2 semesters) covers the following topics:

Crystal structure and binding

Reciprocal space

Lattice dynamics and thermal properties

Electronic structure (free-electron gas, Fermi surface, band structure)

Semiconductors and metals

Transport properties

Dielectric function and screening

Superconductivity

Magnetism

Recommended Literature:

Skriptum (available during the course)

Ashcroft/Mermin: Solid State Physics

Kittel: Introduction to Solid State Physics

Ibach/Lüth: Festkörperphysik

Module:	Specialization: Experimental Physics
----------------	---

Module No.: physics61a

Course:	 Laser Physics and Nonlinear Optics
----------------	---

Course No.: physics614

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT

Requirements for Participation:**Preparation:****Form of Testing and Examination:**

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

To make the students understand laser physics and nonlinear optics and enable them to practically apply their knowledge in research and development.

Pivotal experiments will be shown during the lecture. The acquired knowledge will be dealt with in depth in the exercise groups. An additional offer: interested students may build and investigate a nitrogen laser device.

Contents of the Course:

Laser physics: advanced geometric optics and wave optics (ABCDmatrix, Gauss rays, wave guides). Light-matter interaction (spontaneous/ excited processes, inversion, light intensification). Principle of the laser; mode of operation and properties of lasers (standing wave-/ring laser, mode condition, hole burning). Continuous wave laser (gas, solid states), pulsed laser (Q-switching, mode coupling), optical properties of semiconductors, semiconductor laser; dynamic properties of laser light (Schawlow-Townes line width, chaotic laser radiation). Petawatt laser, white light laser, free electron laser, laser application in telecommunications, metrology and material processing;
Nonlinear Optics: Frequency doubling, sum-, difference frequency generation, parametric oscillators, phase matching (critical, non-critical, quasi), photorefraction, nonlinear Kerr effect, 4-wave mixing.

Recommended Literature:

D. Meschede; Optik, Licht und Laser (Teubner, Wiesbaden 2. überarb. Aufl. 2005)

F. K. Kneubühl; Laser (Teubner, Wiesbaden 6th edition 2005)

Fundamentals of Quantum Mechanics, Atomic Physics

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work within the exercises

Length of Course:

1 semester

Aims of the Course:

The aim of the course is to give the students a deeper insight to the field of atomic, molecular and optical (AMO) physics. Building on prior knowledge from the Bachelor courses it will cover advanced topics of atomic and molecular physics, as well as the interaction of light and matter.

Contents of the Course:

Atomic physics: Atoms in external fields; QED corrections: Lamb-Shift; Interaction of light and matter: Lorentz oscillator, selection rules; magnetic resonance; Coherent control

Molecular physics: Hydrogen Molecule; Vibrations and rotations of molecules; Hybridization of molecular orbitals; Feshbach Resonances; Photoassociation; Cold Molecules

Bose Condensation; Matterwave Optics

Recommended Literature:

C. J. Foot, Atomic Physics, Oxford University Press 2005

H. Haken, The physics of atoms and quanta, Springer 1996

S. Svanberg, Atomic and molecular spectroscopy basic aspects and practical applications, Springer 2001

Requirements for Participation:**Preparation:**

Atomic Physics, Molecular Physics and Quantum Mechanics at the level of the bachelor courses in physics

Form of Testing and Examination:

Oral Examination

Length of Course:

1 semester

Aims of the Course:

In the first part of the core courses the students learn the main concepts of molecular physics: separation of electronic, vibrational and rotational motion. Simple molecular spectra can be analyzed on the basis of the problem class. Fundamental group theory is used to predict vibrational and rotational spectra of more complex molecules.

This module prepares for topics of current research in molecular physics and provides the basis for the preparation of the master thesis.

Contents of the Course:

- Basics of molecular spectroscopy, phenomenology, diatomic molecules
- Born-Oppenheimer Approximation, separation of rotation and vibration
- Molecular Dipole moment and rotational transitions
- Rotational spectra and the rigid rotor approach
- Selection rules, parallel and perpendicular type spectra
- Nuclear spin statistics
- Hyperfine structure of molecular lines

Recommended Literature:

Bernath, "Spectra of Atoms and Molecules", Oxford University Press)

Townes Schawlow, "Microwave Spectroscopy" (Dover Publications)

Gordy & Cook, "Microwave Spectra" (Wiley)

Engelke, "Aufbau der Moleküle" (Teubner)

P. R. Bunker and Per Jensen: "Molecular Symmetry and Spectroscopy, 2nd Edition", (NRC Research Press, Ottawa)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

In depth treatment of particle physics at high energy colliders with emphasis on LHC

Contents of the Course:

Kinematics of electron-proton and proton-(anti)proton collisions,
 Electron-positron, electron-hadron and hadron-hadron reactions, hard scattering processes,
 Collider machines (LEP, Tevatron and LHC) and their detectors (calorimetry and tracking),
 the Standard Model of particle physics in the nutshell, fundamental questions posed to the LHC,
 spontaneous symmetry breaking and experiment,
 QCD and electroweak physics with high-energy hadron colliders,
 Physics of the top quark, top cross section and mass measurements,
 Higgs Physics at the LHC (search strategies, mass measurement, couplings),
 Supersymmetry and beyond the Standard Model physics at the LHC
 Determination of CKM matrix elements, CP violation in K and B systems,
 Neutrino oscillations

Recommended Literature:

physics611 (Particle Physics)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises.

Length of Course:

1 semester

Aims of the Course:

To discuss advanced topics of high energy particle physics which are the subject of current research efforts and to deepen understanding of experimental techniques in particle physics.

Contents of the Course:

Selected topics of current research in experimental particle physics. Topics will be updated according to progress in the field. For example:

- LHC highlights
- CP-violation experiments
- Experimental challenges in particle and astroparticle physics
- Current questions in neutrino physics

Recommended Literature:

- A. Seiden; Particle Physics: A Comprehensive Introduction (Cummings 2004)
 R.K. Ellis, B.R. Webber, W.J. Stirling; QCD and Collider Physics (Cambridge Monographs on Particle Physics 1996)

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Make the students understand quantum optics and enable them to practically apply their knowledge in research and development.

Contents of the Course:

Bloch Vector, Bloch equations,
 Quantization of the electromagnetic field; representations;
 coherence, correlation functions; single-mode quantum optics; squeezing;
 interaction of quantized radiation and atoms;
 two & three level atoms; artificial atoms;
 quantum information
 Laser cooling; quantum gases

Recommended Literature:

R. Loudon; The quantum theory of light (Oxford University Press 2000)
 G. J. Milburn, D. F. Walls; Quantum Optics (Springer 1994)
 D. Meschede; Optik, Licht und Laser (Teubner, Wiesbaden 2nd edition. 2005)

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

To give an introduction to the standard theories of both fields as major example of collective phenomena in condensed-matter physics and comparison with experiments

Contents of the Course:

Magnetism:

orbital and spin magnetism without interactions, exchange interactions, phase transitions, magnetic ordering and domains, magnetism in 1-3 dimensions, spin waves (magnons), itinerant magnetism, colossal magnetoresistance

Superconductivity:

macroscopic aspects, type I and type II superconductors, Ginzburg-Landau theory, BCS theory, Josephson effect, superfluidity, high-temperature superconductivity

Recommended Literature:

L. P. Lévy: Magnetism and superconductivity (Springer; Heidelberg 2000)

P. Mohn: Magnetism in the Solid State - An Introduction (Springer, Heidelberg 2005)

Requirements for Participation:**Preparation:**

Atomic Physics, Molecular Physics and Quantum Mechanics at the level of the bachelor courses in physics, Molecular Physics I

Form of Testing and Examination:

Oral Examination

Length of Course:

1 semester

Aims of the Course:

In the second part of the core courses more complex issues of molecular spectra are introduced. The students will be enabled to analyze spectra of complex molecules which are subject to couplings between electronic, vibrational and rotational motions.

In the special courses basic and advanced molecular physics are applied to atmospheric and astronomical environments.

This module prepares for topics of current research in molecular physics and provides the basis for the preparation of the master thesis.

Contents of the Course:

- Vibrational modes of polyatomic molecules
- Fundamentals of point group symmetry
- Vibrational dipole moment and selection rules
- Characteristic ro-vibrational spectra of selected molecules
- Breakdown of Born-Oppenheimer Approximation
- Coupling of rotation and vibration
- Coupling of angular momenta in molecular physics

Recommended Literature:

Theoretical Particle Physics (physics615)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the

Length of Course:

1 semester

Aims of the Course:

Survey of methods of theoretical high energy physics beyond the standard model, in particular supersymmetry and extra dimensions in regard to current research

Contents of the Course:

Introduction to supersymmetry and supergravity,
 Supersymmetric extension of the electroweak standard model,
 Supersymmetric grand unification,
 Theories of higher dimensional space-time,
 Unification in extra dimensions

Recommended Literature:

J. Wess; J. Bagger; Supersymmetry and supergravity (Princeton University Press 1992)
 H. P. Nilles, Supersymmetry, Supergravity and Particle Physics, Physics Reports 110 C (1984) 1
 D. Bailin; A. Love; Supersymmetric Gauge Field Theory and String Theory (IOP Publishing Ltd. 1994)
 M. F. Sohnius; Introducing supersymmetry, (Phys.Res. 128 C (1985) 39)
 P. Freund; Introduction to Supersymmetry (Cambridge University Press 1995)

Requirements for Participation:

Preparation:

physics617 (Theoretical Condensed Matter Physics)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Survey of methods of theoretical condensed matter physics and their application to prominent examples in regard to current research

Contents of the Course:

Bosonic systems:
Bose-Einstein condensation
Photonics

Quantum dynamics of many-electrons systems:

Feynman diagram technique for many-particle systems at finite temperature

Quantum magnetism, Kondo effect, Renormalization group techniques

Disordered systems: Electrons in a random potential

Superconductivity

Recommended Literature:

A. A. Abrikosov, L.P. Gorkov; Methods of Quantum Field Theory in Statistical Physics (Dover, New York 1977)

W. Nolting; Grundkurs Theoretische Physik Band 7: Vielteilchentheorie (Springer, Heidelberg 2002)

Requirements for Participation:**Preparation:**

physics611 (Particle Physics), useful: Lectures Observational Astronomy

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Basics of particle astrophysics and cosmology

Contents of the Course:

Observational Overview (distribution of galaxies, redshift, Hubble expansion, CMB, cosmic distance ladder, comoving distance, cosmic time, comoving distance and redshift, angular size and luminosity distance); Standard Cosmology (cosmological principle, expansion scale factor, curved space-time, horizons, Friedmann-Equations, cosmological constant, cosmic sum rule, present problems); Particle Physics relevant to cosmology (Fundamental Particles and their Interactions, quantum field theory and Lagrange formalism, Gauge Symmetry, spontaneous symmetry breaking and Higgs mechanism, parameters of the Standard Model, Running Coupling Constants, CP Violation and Baryon Asymmetry, Neutrinos); Thermodynamics in the Universe (Equilibrium Thermodynamics and freeze out, First Law and Entropy, Quantum Statistics, neutrino decoupling, reheating, photon decoupling); Nucleosynthesis (Helium abundance, Fusion processes, photon/baryon ratio)

Dark Matter (Galaxy Rotation Curves, Clusters of Galaxies, Hot gas, Gravitational lensing, problems with Cold Dark Matter Models, Dark Matter Candidates); Inflation and Quintessence; Cosmic Microwave Background (origin, intensity spectrum, CMB anisotropies, Temperature correlations, power spectrum, cosmic variance, density and temperature fluctuations, causality and changing horizons, long and short wavelength modes, interpretation of the power spectrum)

Recommended Literature:

A. Liddle; An Introduction to Modern Cosmology (Wiley & Sons 2. Ed. 2003)

E. Kolb, M. Turner; The Early Universe (Addison Wesley 1990)

J. Peacock; Cosmological Physics (Cambridge University Press 1999)

Modules:

Course:

Advanced Electronics and Signal Processing (E/A)

Course No.: physics712

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	ST

Requirements for Participation:**Preparation:**

Electronics laboratory of the B.Sc. in physics programme

Recommended: module nuclear and particle physics of the B.Sc. programme

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Comprehension of the basics of electronics circuits for the processing of (detector) signals, mediation of the basics of experimental techniques regarding electronics and micro electronics as well as signal processing

Contents of the Course:

The physics of electronic devices, junctions, transistors (BJT and FET), standard analog and digital circuits, amplifiers, elements of CMOS technologies, signal processing, ADC, DAC, noise sources and noise filtering, coupling of electronics to sensors/detectors, elements of chip design, VLSI electronics, readout techniques for detectors

Recommended Literature:

P. Horowitz, W. Hill; The Art of Electronics (Cambridge University Press 2. Aufl. 1989)

S. Sze; The Physics of Semiconductor Devices (Wiley & Sons 1981)

H. Spieler, Semiconductor detector system (Oxford University Press 2005))

J. Krenz; Electronics Concepts (Cambridge University Press 2000)

Modules:

Course:

Particle Detectors and Instrumentation (E/A)

Course No.: physics713

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with laboratory	English	3+1	6	ST

Requirements for Participation:**Preparation:**

Completed B.Sc. in Physics, with experience in quantum mechanics, atomic- and nuclear physics

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Designing an experiment in photoproduction on π^0 , selection and building of appropriate detectors, set-up and implementation of an experiment at ELSA

Contents of the Course:

Quark structure of mesons and baryons, nucleon excitation; electromagnetic probes, electron accelerators, photon beams, relativistic kinematics interaction of radiation with matter, detectors for photons, leptons and hadrons; laboratory course: setup of detectors and experiment at ELSA

Recommended Literature:

B. Povh, K. Rith, C. Scholz, F. Zetsche; Teilchen und Kerne (Springer, Heidelberg 6. Aufl. 2004)

Perkins; Introduction to High Energy Physics (Cambridge University Press 4. Aufl. 2000)

Requirements for Participation:**Preparation:**

Accelerator Physics (physics612)

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding of the physics of synchrotron radiation and its influence on beam parameters
 Basic knowledge of collective phenomena in particle accelerators
 General knowledge of applications of particle accelerators (research, medicine, energy management)

Contents of the Course:

Synchrotron radiation:

radiation power, spatial distribution, spectrum, damping, equilibrium beam emittance, beam lifetime

Space-charge effects:

self-field and wall effects, beam-beam effects, space charge dominated beam transport, neutralization of beams by ionization of the residual gas

Collective phenomena:

wake fields, wake functions and coupling impedances, spectra of a stationary and oscillating bunches, bunch interaction with an impedance, Robinson instability

Applications of particle accelerators:

medical accelerators, neutrino facilities, free electron lasers, nuclear waste transmutation, etc.

Recommended Literature:

F. Hinterberger; Physik der Teilchenbeschleuniger und Ionenoptik (Springer, Heidelberg 1997)

H. Wiedemann; Particle Accelerator Physics (Springer, Heidelberg 2 Aufl. 1999)

K. Wille; Physik der Teilchenbeschleuniger und Synchrotronstrahlungsquellen (Teubner, Wiesbaden 2. Aufl. 1996)

Module No.: physics70a

Course:	 High Energy Physics Lab (E)
----------------	--

Course No.: physics717

Category	Type	Language	Teaching hours	CP	Semester
Elective	Laboratory	English		4	WT/ST

Requirements for Participation:**Preparation:**

Recommended: B.Sc. in physics, physics611 (Particle Physics) or physics618 (Physics of Particle Detectors)

Form of Testing and Examination:

Credit points can be obtained after completion of a written report or, alternatively, a presentation in a meeting of the research group.

Length of Course:

4-6 weeks

Aims of the Course:

This is a research internship in one of the high energy physics research groups which prepare and carry out experiments at external accelerators. The students deepen their understanding of particle and/or detector physics by conducting their own small research project as a part-time member of one of the research groups. The students learn methods of scientific research in particle physics data analysis, in detector development for future colliders or in biomedical imaging (X-FEL) and present their work at the end of the project in a group meeting.

Contents of the Course:

Several different topics are offered among which the students can choose. Available projects can be found at <http://heplab.physik.uni-bonn.de>. For example:

- Analysis of data from one of the large high energy physics experiments (ATLAS, DØ, ZEUS)
- Investigation of low-noise semiconductor detectors using cosmic rays, laser beams or X-ray tubes
- Study of particle physics processes using simulated events
- Signal extraction and data mining with advanced statistical methods (likelihoods, neural nets or boosted decision trees)

Recommended Literature:

Will be provided by the supervisor

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

Course:

C++ Programming in High Energy Physics (E/A)

Course No.: physics718

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	2+1	4	ST

Requirements for Participation:**Preparation:**

Basic knowledge of programming and knowledge of simple C++ or C constructs.

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises.

Length of Course:

1 semester

Aims of the Course:

In-depth understanding of C++ and its applications in particle physics. Discussion of advanced features of C++ using examples from High Energy Physics. The course is intended for students with some background in C++ or for advanced students who wish to apply C++ in their graduate research.

Contents of the Course:

Basic ingredients of C++
 Object orientation: classes, inheritance, polymorphism
 How to solve physics problems with C++
 Standard Template Library
 C++ in Data analysis, example: the ROOT library
 C++ and large scale calculations
 How to write and maintain complex programs
 Parallel computing and the Grid
 Debugging and profiling

Recommended Literature:

Eckel: Thinking in C++, Prentice Hall 2000.
 Lippman, Lajoie, Moo: C++ Primer, Addison-Wesley 2000.
 Deitel and Deitel, C++ how to program, Prentice Hall 2007.
 Stroustrup, The C++ Programming Language, Addison-Wesley 2000.

Module:	Elective Advanced Lectures: Experimental Physics
----------------	---

Course:		Intensive Week: Advanced Topics in High Energy Physics (E)
----------------	---	---

Course No.: physics719

Category	Type	Language	Teaching hours	CP	Semester
Elective	Combined lecture, seminar, lab course	English	3	4	WT/ST

Requirements for Participation:

Preparation:

Fundamentals of particle physics

Form of Testing and Examination:

Seminar talk

Length of Course:

1 - 2 weeks

Aims of the Course:

This course is about an advanced, current topic in particle physics. The students will gain insights into recent developments in particle physics and participate in lectures, seminars talks and laboratory projects.

Contents of the Course:

As announced in the course catalogue. The main topic will vary from semester to semester.

Recommended Literature:

Will be given in the lecture.

Module:	Elective Advanced Lectures: Experimental Physics
----------------	---

Module No.: physics70a

Course:	 Physics with Antiprotons (E)
----------------	---

Course No.: physics720

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	WT

Requirements for Participation:

Preparation:

Completed B.Sc. in Physics, with experience in quantum mechanics, atomic- and nuclear physics

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

Insight in current research topics with antiprotons, understanding experimental methods in particle and nuclear physics, understanding interrelations between different fields of physics such as hadron physics, (astro-)particle physics, atomic physics

Contents of the Course:

Matter-antimatter asymmetry, test of the standard model, anti-hydrogen, anti-protonic atoms, antiproton beams, key issues in hadron physics with antiprotons, planned research facilities (FAIR) and experiments (PANDA)

Recommended Literature:

B. Povh, K. Rith, C. Scholz, F. Zetsche; Teilchen und Kerne (Springer, Heidelberg 8. Aufl. 2009)

D.H. Perkins; Introduction to High Energy Physics (Cambridge University Press 4. Aufl. 2000)

further literature will be given in the lecture

Module:	Elective Advanced Lectures: Experimental Physics

Elective	Combined lecture, seminar, lab course	English	3	4	WT/ST

Requirements for Participation:

Preparation:

Fundamentals of hadron physics

Form of Testing and Examination:

Presentation, working group participation

Length of Course:

1 - 2 weeks

Aims of the Course:

This course will convey recent topics in hadron physics. Guided by lectures, original publications and tutors, the students will prepare a proposal for a planned or recent experiment. The class will not only focus on the experimental aspects, but also on the theoretical motivation for the experiment.

Contents of the Course:

As announced in the course catalogue. The main topics will vary from semester to semester.

Recommended Literature:

Will be given in the lecture

Module:	Elective Advanced Lectures: Experimental Physics

Module No.: physics70a

Course:	 universität bonn	Advanced Gaseous Detectors - Theory and Practice (E)
----------------	--	---

Course No.: physics722

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with laboratory	English	3+1	6	ST

Requirements for Participation:
--

Preparation:

Completed B.Sc. in physics, with experience in electrodynamics, quantum mechanics, nuclear and particle physics, physics618 (Physics of Particle Detectors)

Form of Testing and Examination:

Requirements for the examination (written or oral): submission of report
--

Length of Course:

1 semester

Aims of the Course:

- Design, construction, commissioning and characterization of a modern gaseous particle detector
- Simulations: GARFIELD, GEANT, FE-Methods, etc.
- Signals, Readout electronics and Data Acquisition
- Data analysis: pattern recognition methods, track fitting
- Scientific writing: report

Contents of the Course:

- Signal formation in detectors
- Microscopic processes in gaseous detectors
- Readout electronics
- Tools for detector design and simulation
- Performance criteria
- Laboratory course: commissioning of detector with sources, beam test at accelerator
- Track reconstruction

Recommended Literature:

<http://root.cern.ch>

<http://garfieldpp.web.cern.ch/garfieldpp/>

Blum, Rolandi, Riegler: Particle Detection with Drift Chambers

Spieler: Semiconductor Detector Systems

Modules:

Course:**Low Temperature Physics (E/A)**

Course No.: physics731

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT/ST

Requirements for Participation:**Preparation:**

Elementary thermodynamics; principles of quantum mechanics; introductory lecture on solid state physics

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Experimental methods at low (down to micro Kelvin) temperatures; methods of refrigeration; thermometry; solid state physics at low temperatures

Contents of the Course:

Thermodynamics of different refrigeration processes, liquefaction of gases; methods to reach low (< 1 Kelvin) temperatures: evaporation cooling, He-3-He-4 dilution cooling, Pomeranchuk effect, adiabatic demagnetisation of atoms and nuclei; thermometry at low temperatures (e.g. helium, magnetic thermometry, noise thermometry, thermometry using radioactive nuclei); principles for the construction of cryostats for low temperatures

Recommended Literature:

O.V. Lounasmaa; Experimental Principles and Methods Below 1K (Academic Press, London 1974)

R.C. Richardson, E.N. Smith; Experimental Techniques in Condensed Matter Physics at Low Temperatures (Addison-Wesley 1988)

physics70b **Elective Advanced Lectures: Applied Physics**

Course:**Optics Lab (E/A)**

Course No.: physics732

Category	Type	Language	Teaching hours	CP	Semester
Elective	Laboratory	English		4	WT/ST

Requirements for Participation:**Preparation:****Form of Testing and Examination:**

Credit points can be obtained after completion of a written report.

Length of Course:

4-6 weeks

Aims of the Course:

The student learns to handle his/her own research project within one of the optics groups

Available projects and contact information can be found at: <http://www.iap.uni-bonn.de/opticslab/>

Contents of the Course:

Practical training/internship in a research group, which can have several aspects:

- setting up a small experiment
- testing and understanding the limits of experimental components
- simulating experimental situations

Recommended Literature:

Will be given by the supervisor

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

Course:**Holography (E/A)**

Course No.: physics734

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	ST

Requirements for Participation:**Preparation:****Form of Testing and Examination:**

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

The goal of the course is to provide in-depth knowledge and to provide practical abilities in the field of holography as an actual topic of applied optics

Contents of the Course:

The course will cover the basic principle of holography, holographic recording materials, and applications of holography. In the first part the idea behind holography will be explained and different hologram types will be discussed (transmission and reflection holograms; thin and thick holograms; amplitude and phase holograms; white-light holograms; computer-generated holograms; printed holograms). A key issue is the holographic recording material, and several material classes will be introduced in the course (photographic emulsions; photochromic materials; photo-polymerization; photo-addressable polymers; photorefractive crystals; photosensitive inorganic glasses). In the third section several fascinating applications of holography will be discussed (art; security-features on credit cards, banknotes, and passports; laser technology; data storage; image processing; filters and switches for optical telecommunication networks; novelty filters; phase conjugation ["time machine"]; femtosecond holography; space-time conversion). Interested students can also participate in practical training. An experimental setup to fabricate own holograms is available

Recommended Literature:

P. Hariharan; Optical Holography - Principles, Techniques, and Applications (Cambridge University Press, 2nd Edition, 1996)

P. Hariharan; Basics of Holography (Cambridge University Press 2002)

J. W. Goodman; Introduction to Fourier Optics (McGraw-Hill Education - Europe 2nd Ed. 2000)

A. Yariv; Photonics (Oxford University Press 6th Ed. 2006)

Module:	Elective Advanced Lectures: Experimental Physics
----------------	---

Module No.: physics70a

Course:		Laser Cooling and Matter Waves (E)
----------------	---	---

Course No.: physics735

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	WT/ST

Requirements for Participation:
--

Preparation:

Basic thermodynamics: fundamentals of quantum mechanics, fundamentals of solid state physics
--

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

The in-depth lecture shows, in theory and experiments, the fundamentals of laser cooling. The application of laser cooling in atom optics, in particular for the preparation of atomic matter waves, is shown. New results in research with degenerated quantum gases enable us to gain insight into atomic many particle physics

Contents of the Course:

Outline: Light-matter interaction; mechanic effects of light; Doppler cooling; polarization gradient cooling, magneto-optical traps; optical molasses; cold atomic gases; atom interferometry; Bose-Einstein condensation of atoms; atom lasers; Mott insulator phase transitions; mixtures of quantum gases; fermionic degenerate gases

Recommended Literature:

P. v. d. Straten, H. Metcalf; Laser Cooling (Springer, Heidelberg 1999)

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

Course:**Crystal Optics (E/A)**

Course No.: physics736

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT

Requirements for Participation:**Preparation:****Form of Testing and Examination:**

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Because of their aesthetic nature crystals are termed "flowers of mineral kingdom". The aesthetic aspect is closely related to the symmetry of the crystals which in turn determines their optical properties. It is the purpose of this course to stimulate the understanding of these relations. The mathematical and tools for describing symmetry and an introduction to polarization optics will be given before the optical properties following from crystal symmetry are discussed. Particular emphasis will be put on the magneto-optical properties of crystals in magnetic internal or external fields. Advanced topics such as the determination of magnetic structures and interactions by nonlinear magneto-optics will conclude the course

Contents of the Course:

Crystal classes and their symmetry; basic group theory; polarized light; optical properties in the absence of fields; electro-optical properties; magneto-optical properties: Faraday effect, Kerr effect, magneto-optical materials and devices, semiconductor magneto-optics, time-resolved magneto-optics, nonlinear magneto-optics

Recommended Literature:

Course:  universität**bonn**

**Intensive Week: Advanced Topics
in Photonics and Quantum Optics
(E)**

Course No.: physics737

Category	Type	Language	Teaching hours	CP	Semester
Elective	Combined lecture, seminar, lab course	English	3	4	WT/ST

Requirements for Participation:

Preparation:

Fundamentals of optics, fundamentals of quantum mechanics

Form of Testing and Examination:

Seminar or oral examination

Length of Course:

1 - 2 weeks

Aims of the Course:

The intensive course will convey the basics of a recent topic in photonics or quantum optics in theory and experiments. Guided by a combination of lectures, seminar talks (based on original publications) and practical training, the participants will gain insight into recent developments in photonics/quantum optics.

Contents of the Course:

Will be given in the bulletin of lectures. The main theme will vary from term to term

Recommended Literature:

Will be given in the lecture

Module:	Elective Advanced Lectures: Experimental Physics
----------------	---

Module No.: physics70a

Course:	 universität bonn i	Lecture on Advanced Topics in Quantum Optics (E)
----------------	--	---

Course No.: physics738

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	2+1	4	WT/ST

Requirements for Participation:

Preparation:

Fundamentals of Quantum Mechanics, Atomic Physics

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work within the exercises

Length of Course:

1 semester

Aims of the Course:

The goal of the course is to introduce the students to a special field of research in quantum optics. New research results will be presented and their relevance is discussed.

Contents of the Course:

Will be given in the bulletin of lectures. The main theme will vary from term to term

Recommended Literature:

Will be given in the lecture

Modules:

Optics

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work within the exercises

Length of Course:

1 semester

Aims of the Course:

The goal of the course is to introduce the students to a special field of research in photonics. New research results will be presented and their relevance is discussed.

Contents of the Course:

Will be given in the bulletin of lectures. The main theme will vary from term to term

Recommended Literature:

Will be given in the lecture

This course may be offered as "Teaching hours (3+1)" with 6 cp, as well

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

Course:

Hands-on Seminar: Experimental Optics and Atomic Physics (E/A)

Course No.: physics740

Category	Type	Language	Teaching hours	CP	Semester
Elective	Laboratory	English	2	3	WT/ST

Requirements for Participation:**Preparation:**

Fundamentals of optics and quantum mechanics

Form of Testing and Examination:

Credit points can be obtained after successful carrying out the experiments and preparing a written report on selected experiments

Length of Course:

1 semester

Aims of the Course:

The students learn to handle optical setups and carry out optical experiments. This will prepare participants both for the successful completion of research projects in experimental quantum optics/photonics and tasks in the optics industry.

Contents of the Course:

Practical training in the field of optics, where the students start their experiment basically from scratch (i.e. an empty optical table). The training involves the following topics:

- diode lasers
- optical resonators
- acousto-optic modulators
- spectroscopy
- radiofrequency techniques

Recommended Literature:

Will be given by the supervisor

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

Course:**Modern Spectroscopy (E/A)**

Course No.: physics741

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	2+1	4	WT/ST

Requirements for Participation:**Preparation:**

Fundamentals of Optics, Fundamentals of Quantum Mechanics

Form of Testing and Examination:

Requirements for the examination (oral or written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

The aim of the course is to introduce the students to both fundamental and advanced concepts of spectroscopy and enable them to practically apply their knowledge.

Contents of the Course:

Spectroscopy phenomena - time and frequency domain;
 high resolution spectroscopy;
 pulsed spectroscopy; frequency combs;
 coherent spectroscopy;
 nonlinear spectroscopy: Saturation, Raman spectroscopy, Ramsey spectroscopy.
 Applications of spectroscopic methods (e.g. Single molecule spectroscopy; spectroscopy at interfaces & surfaces, spectroscopy of cold atoms; atomic clocks; atom interferometry)

Recommended Literature:

 physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:**Ultracold Atomic Gases (E/T)**

Course No.: physics742

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT

Requirements for Participation:**Preparation:**

Quantum Mechanics

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

This lecture discusses both the experimental and theoretical concepts of ultra-cold atomic gases.

Contents of the Course:

Almost hundred years ago, in 1924, A. Einstein and S.N. Bose predicted the existence of a new state of matter, the so-called Bose-Einstein condensate. It took 70 years to successfully realize this macroscopic quantum state in the lab using ultracold atomic gases (Nobel prize 2001). The main challenge was to achieve cooling to Nanokelvin temperatures, the coolest temperatures ever reached by mankind. Nowadays, ultracold gases are exciting systems to study a broad range of quantum phenomena. These phenomena range from the direct observation of quantum matter waves and superfluidity over the creation of artificial crystal structures as analogous to solids, to the realization of complex quantum phase transitions of interacting atoms, e.g. the formation of a bosonic Mott-insulator or the BCS superconducting state for Fermions. In this lecture we will discuss both the experimental and theoretical concepts of ultra-cold atomic gases.

Outline: Introduction and revision of basic concepts, Fundamentals of atom-laser interaction
 Laser cooling & trapping, Bose-Einstein condensation of atomic gases. Dynamics of Bose-Einstein condensates

Optical lattices: strongly interacting atomic gases and quantum phase transitions

The crossover of Fermi-gases between a BCS superconducting state and a Bose-Einstein condensate of molecules.

Recommended Literature:

C. J. Pethick and H. Smith, Bose-Einstein Condensation in Dilute Gases (Cambridge University Press)

Course:

Internships in the Research Groups

Course No.: physics799

Category	Type	Language	Teaching hours	CP	Semester
Elective	Research Internship	English		4	WT/ST

Requirements for Participation:

Students are asked to contact one of the BCGS lecturers prior to the start of their internship. Lecturers provide help if needed to find a suitable research group and topic. Not all groups may have internships available at all times, thus participation may be limited.

Preparation:

A specialization lecture from the research field in question or equivalent preparation.

Form of Testing and Examination:

A written report or, alternatively, a presentation in a meeting of the research group.

Length of Course:

4-6 weeks

Aims of the Course:

Students conduct their own small research project as a part-time member of one of the research groups in Bonn. The students learn methods of scientific research and apply them to their project.

Contents of the Course:

One of the following possible items:

- setting up a small experiment,
- analyzing data from an existing experiment,
- simulating experimental situations,
- numerical or analytical calculations in a theory group.

Recommended Literature:

provided by the supervisor within the research group.

Module No.:
Credit Points (CP):

Semester:

physics70b
3-6
Elective
1.-2.

Module: Elective Advanced Lectures: Applied Physics

Module Elements:

Nr.	Course Title	Number	CP	Type	Workload	Sem.
1.	Selected courses from catalogue type "A" (Applied) or "E/A" (Experimental/A)	see catalogue	3-6	see catalogue	90-180 hrs	ST/WT
2.	Also possible classes from M.Sc. in Astrophysics					

Requirements for Participation:

none

Form of Examination:

see with the course

Content:

Advanced lectures in applied physics

Aims/Skills:

Preparation for Master's Thesis work; broadening of scientific knowledge

Course achievement/Criteria for awarding cp's:

see with the course

Length of Module: 1 or 2 semester

Maximum Number of Participants: ca. 100

Registration Procedure:

s. <https://basis.uni-bonn.de> u. <http://bamawww.physik.uni-bonn.de>

Note: The student must achieve at least 18 CP out of all 4 Elective Advanced Modules

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

Course:

Advanced Electronics and Signal Processing (E/A)

Course No.: physics712

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	ST

Requirements for Participation:**Preparation:**

Electronics laboratory of the B.Sc. in physics programme

Recommended: module nuclear and particle physics of the B.Sc. programme

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Comprehension of the basics of electronics circuits for the processing of (detector) signals, mediation of the basics of experimental techniques regarding electronics and micro electronics as well as signal processing

Contents of the Course:

The physics of electronic devices, junctions, transistors (BJT and FET), standard analog and digital circuits, amplifiers, elements of CMOS technologies, signal processing, ADC, DAC, noise sources and noise filtering, coupling of electronics to sensors/detectors, elements of chip design, VLSI electronics, readout techniques for detectors

Recommended Literature:

P. Horowitz, W. Hill; The Art of Electronics (Cambridge University Press 2. Aufl. 1989)

S. Sze; The Physics of Semiconductor Devices (Wiley & Sons 1981)

H. Spieler, Semiconductor detector system (Oxford University Press 2005))

J. Krenz; Electronics Concepts (Cambridge University Press 2000)

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

Course:

Particle Detectors and Instrumentation (E/A)

Course No.: physics713

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with laboratory	English	3+1	6	ST

Requirements for Participation:**Preparation:**

Completed B.Sc. in Physics, with experience in quantum mechanics, atomic- and nuclear physics

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Designing an experiment in photoproduction on π^0 , selection and building of appropriate detectors, set-up and implementation of an experiment at ELSA

Contents of the Course:

Quark structure of mesons and baryons, nucleon excitation; electromagnetic probes, electron accelerators, photon beams, relativistic kinematics interaction of radiation with matter, detectors for photons, leptons and hadrons; laboratory course: setup of detectors and experiment at ELSA

Recommended Literature:

B. Povh, K. Rith, C. Scholz, F. Zetsche; Teilchen und Kerne (Springer, Heidelberg 6. Aufl. 2004)
 Perkins; Introduction to High Energy Physics (Cambridge University Press 4. Aufl. 2000)

Elective	Lecture with exercises	English	3+1	6	ST/WT

Requirements for Participation:**Preparation:**

Accelerator Physics (physics612)

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding of the physics of synchrotron radiation and its influence on beam parameters
 Basic knowledge of collective phenomena in particle accelerators
 General knowledge of applications of particle accelerators (research, medicine, energy management)

Contents of the Course:

Synchrotron radiation:

radiation power, spatial distribution, spectrum, damping, equilibrium beam emittance, beam lifetime

Space-charge effects:

self-field and wall effects, beam-beam effects, space charge dominated beam transport, neutralization of beams by ionization of the residual gas

Collective phenomena:

wake fields, wake functions and coupling impedances, spectra of a stationary and oscillating bunches, bunch interaction with an impedance, Robinson instability

Applications of particle accelerators:

medical accelerators, neutrino facilities, free electron lasers, nuclear waste transmutation, etc.

Recommended Literature:

F. Hinterberger; Physik der Teilchenbeschleuniger und Ionenoptik (Springer, Heidelberg 1997)

H. Wiedemann; Particle Accelerator Physics (Springer, Heidelberg 2 Aufl. 1999)

K. Wille; Physik der Teilchenbeschleuniger und Synchrotronstrahlungsquellen (Teubner, Wiesbaden 2. Aufl. 1996)

D. A. Edwards, M.J. Syphers; An Introduction to the Physics of High Energy Accelerators (Wiley & Sons 1993)

A. Chao; Physics of Collective Beam Instabilities in High Energy Accelerators (Wiley & Sons 1993)

physics70b **Elective Advanced Lectures: Applied Physics**

Course:

C++ Programming in High Energy Physics (E/A)

Course No.: physics718

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	2+1	4	ST

Requirements for Participation:**Preparation:**

Basic knowledge of programming and knowledge of simple C++ or C constructs.

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises.

Length of Course:

1 semester

Aims of the Course:

In-depth understanding of C++ and its applications in particle physics. Discussion of advanced features of C++ using examples from High Energy Physics. The course is intended for students with some background in C++ or for advanced students who wish to apply C++ in their graduate research.

Contents of the Course:

Basic ingredients of C++
 Object orientation: classes, inheritance, polymorphism
 How to solve physics problems with C++
 Standard Template Library
 C++ in Data analysis, example: the ROOT library
 C++ and large scale calculations
 How to write and maintain complex programs
 Parallel computing and the Grid
 Debugging and profiling

Recommended Literature:

Eckel: Thinking in C++, Prentice Hall 2000.
 Lippman, Lajoie, Moo: C++ Primer, Addison-Wesley 2000.
 Deitel and Deitel, C++ how to program, Prentice Hall 2007.
 Stroustrup, The C++ Programming Language, Addison-Wesley 2000.

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

Course:**Low Temperature Physics (E/A)**

Course No.: physics731

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT/ST

Requirements for Participation:**Preparation:**

Elementary thermodynamics; principles of quantum mechanics; introductory lecture on solid state physics

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Experimental methods at low (down to micro Kelvin) temperatures; methods of refrigeration; thermometry; solid state physics at low temperatures

Contents of the Course:

Thermodynamics of different refrigeration processes, liquefaction of gases; methods to reach low (< 1 Kelvin) temperatures: evaporation cooling, He-3-He-4 dilution cooling, Pomeranchuk effect, adiabatic demagnetisation of atoms and nuclei; thermometry at low temperatures (e.g. helium, magnetic thermometry, noise thermometry, thermometry using radioactive nuclei); principles for the construction of cryostats for low temperatures

Recommended Literature:

O.V. Lounasmaa; Experimental Principles and Methods Below 1K (Academic Press, London 1974)

R.C. Richardson, E.N. Smith; Experimental Techniques in Condensed Matter Physics at Low Temperatures (Addison-Wesley 1988)

physics70b **Elective Advanced Lectures: Applied Physics**

Course:**Optics Lab (E/A)**

Course No.: physics732

Category	Type	Language	Teaching hours	CP	Semester
Elective	Laboratory	English		4	WT/ST

Requirements for Participation:**Preparation:****Form of Testing and Examination:**

Credit points can be obtained after completion of a written report.

Length of Course:

4-6 weeks

Aims of the Course:

The student learns to handle his/her own research project within one of the optics groups

Available projects and contact information can be found at: <http://www.iap.uni-bonn.de/opticslab/>

Contents of the Course:

Practical training/internship in a research group, which can have several aspects:

- setting up a small experiment
- testing and understanding the limits of experimental components
- simulating experimental situations

Recommended Literature:

Will be given by the supervisor

Modules:	physics70a Elective Advanced Lectures: Experimental Physics
	physics70b Elective Advanced Lectures: Applied Physics

Course:  **Holography (E/A)**

Course No.: physics734

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	ST

Requirements for Participation:

Preparation:

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

The goal of the course is to provide in-depth knowledge and to provide practical abilities in the field of holography as an actual topic of applied optics

Contents of the Course:

The course will cover the basic principle of holography, holographic recording materials, and applications of holography. In the first part the idea behind holography will be explained and different hologram types will be discussed (transmission and reflection holograms; thin and thick holograms; amplitude and phase holograms; white-light holograms; computer-generated holograms; printed holograms). A key issue is the holographic recording material, and several material classes will be introduced in the course (photographic emulsions; photochromic materials; photo-polymerization; photo-addressable polymers; photorefractive crystals; photosensitive inorganic glasses). In the third section several fascinating applications of holography will be discussed (art; security-features on credit cards, banknotes, and passports; laser technology; data storage; image processing; filters and switches for optical telecommunication networks; novelty filters; phase conjugation ["time machine"]; femtosecond holography; space-time conversion). Interested students can also participate in practical training. An experimental setup to fabricate own holograms is available

Recommended Literature:

Lecture notes;

P. Hariharan; Optical Holography - Principles, Techniques, and Applications (Cambridge University Press, 2nd Edition, 1996)

P. Hariharan; Basics of Holography (Cambridge University Press 2002)

physics70b **Elective Advanced Lectures: Applied Physics**

Course:**Crystal Optics (E/A)**

Course No.: physics736

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT

Requirements for Participation:**Preparation:****Form of Testing and Examination:**

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Because of their aesthetic nature crystals are termed "flowers of mineral kingdom". The aesthetic aspect is closely related to the symmetry of the crystals which in turn determines their optical properties. It is the purpose of this course to stimulate the understanding of these relations. The mathematical and tools for describing symmetry and an introduction to polarization optics will be given before the optical properties following from crystal symmetry are discussed. Particular emphasis will be put on the magneto-optical properties of crystals in magnetic internal or external fields. Advanced topics such as the determination of magnetic structures and interactions by nonlinear magneto-optics will conclude the course

Contents of the Course:

Crystal classes and their symmetry; basic group theory; polarized light; optical properties in the absence of fields; electro-optical properties; magneto-optical properties: Faraday effect, Kerr effect, magneto-optical materials and devices, semiconductor magneto-optics, time-resolved magneto-optics, nonlinear magneto-optics

----------------	---

Course No.: physics774

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	ST

Requirements for Participation:

Preparation:

Electronics laboratory of the B.Sc. in physics programme

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Comprehension of electronic components, methods to derive the dynamical performance of circuits and mediation that these methods are widely used in various fields of physics

Contents of the Course:

Basics of electrical engineering, RF-electronics I: Telegraph equation, impedance matching for lumped circuits and electromagnetic fields, diodes, transistors, analogue and digital integrated circuits, system analysis via laplace transformation, basic circuits, circuit synthesis, closed loop circuits, oscillators, filters, RF-electronics II: low-noise oscillators and amplifiers

Recommended Literature:

P. Horowitz, W. Hill; The Art of Electronics (Cambridge University Press)
 Murray R. Spiegel; Laplace Transformation (McGraw-Hill Book Company)
 A.J. Baden Fuller; Mikrowellen (Vieweg)
 Lutz v. Wangenheim; Aktive Filter (Hüthig)

Module:	Elective Advanced Lectures: Applied Physics
----------------	--

Module No.: physics70b

Course:		Nuclear Reactor Physics (A)
----------------	---	------------------------------------

Course No.: physics775

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	ST

Requirements for Participation:

Preparation:

Fundamental nuclear physics

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

Deeper understanding of nuclear power generation (fission and fusion)

Contents of the Course:

Physics of nuclear fission and fusion, neutron flux in reactors, different reactor types, safety aspects, nuclear waste problem, future aspects and
Excursion to a nuclear power plant

Recommended Literature:

H. Hübel: Reaktorphysik (Vorlesungsskript, available during the lecture)

M. Borlein: Kerntechnik, Vogel (2009)

W. M. Stacey: Nuclear Reactor Physics, Wiley & Sons (2007)

Module: **Elective Advanced Lectures:**
Applied Physics

Module No.: physics70b

Course:  universität**bonn**

Physics in Medicine:
Physics of Magnetic Resonance
Imaging (A)

Course No.: physics776

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT

Requirements for Participation:

Preparation:

Lectures Experimental Physics I-III (physik111-physik311) respectively

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding the principles of Magnetic Resonance Imaging Physics

Contents of the Course:

- Theory and origin of nuclear magnetic resonance (QM and semiclassical approach)
- Spin dynamics, T1 and T2 relaxation, Bloch Equations and the Signal Equation
- Gradient echoes and spin echoes and the difference between T2 and T2*
- On- and off-resonant excitation and the slice selection process
- Spatial encoding by means of gradient fields and the k-space formalism
- Basic imaging sequences and their basic contrasts, basic imaging artifacts
- Hardware components of an MRI scanner, accelerated imaging with multiple receiver
- Computation of signal amplitudes in steady state sequences
- The ultra-fast imaging sequence EPI and its application in functional MRI
- Basics theory of diffusion MRI and its application in neuroimaging
- Advanced topics: quantitative MRI, spectroscopic imaging, X-nuclei MRI

Recommended Literature:

- T. Stöcker: Skriptum zur Vorlesung
- E.M. Haacke et al, Magnetic Resonance Imaging: Physical Principles and Sequence Design, John Wiley 1999
- M.T. Vlaardingerbroek, J.A. den Boer, Magnetic Resonance Imaging: Theory and Practice, Springer, 20
- Z.P. Liang, P.C. Lauterbur, Principles of Magnetic Resonance Imaging: A Signal Processing Perspective, SPIE 1999

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:

Internships in the Research Groups

Course No.: physics799

Category	Type	Language	Teaching hours	CP	Semester
Elective	Research Internship	English		4	WT/ST

Requirements for Participation:

Students are asked to contact one of the BCGS lecturers prior to the start of their internship. Lecturers provide help if needed to find a suitable research group and topic. Not all groups may have internships available at all times, thus participation may be limited.

Preparation:

A specialization lecture from the research field in question or equivalent preparation.

Form of Testing and Examination:

A written report or, alternatively, a presentation in a meeting of the research group.

Length of Course:

4-6 weeks

Aims of the Course:

Students conduct their own small research project as a part-time member of one of the research groups in Bonn. The students learn methods of scientific research and apply them to their project.

Contents of the Course:

One of the following possible items:

- setting up a small experiment,
- analyzing data from an existing experiment,
- simulating experimental situations,
- numerical or analytical calculations in a theory group.

Recommended Literature:

provided by the supervisor within the research group.

Module No.:
 Credit Points (CP):
 Category:
 Semester:

physics70c
 5-7
 Elective
 1.-2.

Module: Elective Advanced Lectures: Theoretical Physics

Module Elements:

Nr.	Course Title	Number	CP	Type	Workload	Sem.
1.	Selected courses from catalogue type "T" (Theoretical)	see catalogue	5-7	see catalogue	150-210 hrs	WT/ST
2.	Also possible classes from M.Sc. in Astrophysics					

Requirements for Participation:

none

Form of Examination:

see with the course

Content:

Advanced lectures in theoretical physics

Aims/Skills:

Preparation for Master's Thesis work; broadening of scientific knowledge

Course achievement/Criteria for awarding cp's:

see with the course

Length of Module: 1 or 2 semester

Maximum Number of Participants: ca. 100

Registration Procedure:

s. <https://basis.uni-bonn.de> u. <http://bamawww.physik.uni-bonn.de>

Note: The student must achieve at least 18 CP out of all 4 Elective Advanced Modules

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**
 physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:**Ultracold Atomic Gases (E/T)**

Course No.: physics742

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT

Requirements for Participation:**Preparation:**

Quantum Mechanics

Form of Testing and Examination:

Requirements for the examination (written or oral): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

This lecture discusses both the experimental and theoretical concepts of ultra-cold atomic gases.

Contents of the Course:

Almost hundred years ago, in 1924, A. Einstein and S.N. Bose predicted the existence of a new state of matter, the so-called Bose-Einstein condensate. It took 70 years to successfully realize this macroscopic quantum state in the lab using ultracold atomic gases (Nobel prize 2001). The main challenge was to achieve cooling to Nanokelvin temperatures, the coolest temperatures ever reached by mankind. Nowadays, ultracold gases are exciting systems to study a broad range of quantum phenomena. These phenomena range from the direct observation of quantum matter waves and superfluidity over the creation of artificial crystal structures as analogous to solids, to the realization of complex quantum phase transitions of interacting atoms, e.g. the formation of a bosonic Mott-insulator or the BCS superconducting state for Fermions. In this lecture we will discuss both the experimental and theoretical concepts of ultra-cold atomic gases.

Outline: Introduction and revision of basic concepts, Fundamentals of atom-laser interaction
 Laser cooling & trapping, Bose-Einstein condensation of atomic gases. Dynamics of Bose-Einstein condensates

Optical lattices: strongly interacting atomic gases and quantum phase transitions

The crossover of Fermi-gases between a BCS superconducting state and a Bose-Einstein condensate of molecules.

Recommended Literature:

C. J. Pethick and H. Smith, Bose-Einstein Condensation in Dilute Gases (Cambridge University Press)

Modules:

ECThPhysics **Elective Courses Theoretical Physics**
 physics70c **Elective Advanced Lectures: Theoretical

Course:**Group Theory (T)**

Course No.: physics751

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	WT

Requirements for Participation:**Preparation:**

physik421 (Quantum Mechanics)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the

Length of Course:

1 semester

Aims of the Course:

Acquisition of mathematical foundations of group theory with regard to applications in theoretical physics

Contents of the Course:

Mathematical foundations:

Finite groups, Lie groups and Lie algebras, highest weight representations, classification of simple Lie algebras, Dynkin diagrams, tensor products and Young tableaux, spinors, Clifford algebras, Lie super algebras

Recommended Literature:

B. G. Wybourne; Classical Groups for Physicists (J. Wiley & Sons 1974)
 H. Georgi; Lie Algebras in Particle Physics (Perseus Books 2. Aufl. 1999)
 W. Fulton, J. Harris; Representation Theory (Springer, New York 1991)

Requirements for Participation:**Preparation:**

Quantum Field Theory (physics755)

Group Theory (physics751)

Advanced Theoretical Physics (physics607) / Advanced Quantum Field Theory (physics7501)

Theoretical Particle Physics (physics615)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the

Length of Course:

1 semester

Aims of the Course:

Survey of modern string theory as a candidate of a unified theory in regard to current research

Contents of the Course:

Bosonic String Theory, Elementary Conformal Field Theory

Kaluza-Klein Theory

Crash Course in Supersymmetry

Superstring Theory

Heterotic String Theory

Compactification, Duality, D-Branes

M-Theory

Recommended Literature:

D. Lüst, S. Theisen; Lectures on String Theory (Springer, New York 1989)

S. Förste; Strings, Branes and Extra Dimensions, Fortsch. Phys. 50 (2002) 221, hep-th/0110055

C. Johnson, D-Brane Primer (Cambridge University Press 2003)

Requirements for Participation:

Preparation:

General Relativity and Cosmology (physics754)
 Quantum Field Theory (physics755)
 Theoretical Particle Physics (physics615)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Introduction to the current status at the interface of particle physics and cosmology

Contents of the Course:

Topics on the interface of cosmology and particle physics:
 Inflation and the cosmic microwave background;
 baryogenesis,
 Dark Matter,
 nucleosynthesis
 the cosmology and astrophysics of neutrinos

Recommended Literature:

J. Peacock, Cosmological Physics (Cambridge University Press 1998)
 E. Kolb, M. Turner; The Early Universe (Addison Wesley 1990)

Modules: ECThPhysics Elective Courses Theoretical Physics
 physics70c Elective Advanced Lectures: Theoretical
 Physics

Course:  **General Relativity and
 Cosmology (T)**

Course No.: physics754

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	ST

Requirements for Participation:

Preparation:

physik221 and physik321 (Theoretical Physics I and II)
 Differential geometry

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding the general theory of relativity and its cosmological implications

Contents of the Course:

Relativity principle
 Gravitation in relativistic mechanics
 Curvilinear coordinates
 Curvature and energy-momentum tensor
 Einstein-Hilbert action and the equations of the gravitational field
 Black holes
 Gravitational waves
 Time evolution of the universe
 Friedmann-Robertson-Walker solutions

Recommended Literature:

S.Weinberg; Gravitation and Cosmology (J. Wiley & Sons 1972)
 R. Sexl: Gravitation und Kosmologie, Eine Einführung in die Allgemeine Relativitätstheorie (Spektrum Akadem. Verlag 5. Aufl 2002)
 L.D. Landau, E.M. Lifschitz; Course of Theoretical Physics Vol.2: Classical field theory (Butterworth-Heinemann 1995), also available in German from publisher Harry Deutsch

Modules: ECThPhysics **Elective Courses Theoretical Physics**

Requirements for Participation:

Preparation:

Advanced quantum theory (physics606)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding quantum field theoretical methods, ability to compute processes in quantum electrodynamics (QED) and many particle systems

Contents of the Course:

Classical field theory
 Quantization of free fields
 Path integral formalism
 Perturbation theory
 Methods of regularization: Pauli-Villars, dimensional
 Renormalizability
 Computation of Feynman diagrams
 Transition amplitudes in QED
 Applications in many particle systems

Recommended Literature:

N. N. Bogoliubov, D.V. Shirkov; Introduction to the theory of quantized fields (J. Wiley & Sons 1959)
 M. Kaku, Quantum Field Theory (Oxford University Press 1993)
 M. E. Peskin, D.V. Schroeder; An Introduction to Quantum Field Theory (Harper Collins Publ. 1995)
 L. H. Ryder; Quantum Field Theory (Cambridge University Press 1996)
 S. Weinberg; The Quantum Theory of Fields (Cambridge University Press 1995)

Module:	Elective Advanced Lectures: Theoretical Physics

Course:	 Critical Phenomena (T)
----------------	---

Course No.: physics756

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	ST

Requirements for Participation:

Preparation:

Advanced quantum theory (physics606)
Theoretical condensed matter physics (physics617)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Acquisition of important methods to treat critical phenomena

Contents of the Course:

Mean Field Approximation and its Improvements
Critical Behaviour at Surfaces
Statistics of Polymers
Concept of a Tomonaga-Luttinger Fluid
Random Systems
Phase Transitions, Critical Exponents
Scale Behaviour, Conformal Field Theory
Special Topics of Nanoscopic Physics

Recommended Literature:

J. Cardy, Scaling and Renormalization in Statistical Physics (Cambridge University Press, 1996)
A. O. Gogolin, A. A. Nersisyan, A.N.Tsvetik; Bosonisation and strongly correlated systems (Cambridge University Press, 1998)

Module:	Elective Advanced Lectures: Theoretical Physics
----------------	--

Module No.: physics70c

Course:	 universität bonn	Effective Field Theory (T)
----------------	--	-----------------------------------

Course No.: physics757

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	WT/ST

Requirements for Participation:**Preparation:**

Advanced quantum theory (physics606)

Quantum Field Theory (physics755)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding basic properties and construction of Effective Field Theories, ability to perform calculations in Effective Field Theories

Contents of the Course:

Scales in physical systems, naturalness

Effective Quantum Field Theories

Renormalization Group, Universality

Construction of Effective Field Theories

Applications: effective field theories for physics beyond the Standard Model, heavy quarks, chiral dynamics, low-energy nuclear physics, ultracold atoms

Recommended Literature:

S. Weinberg; The Quantum Theory of Fields (Cambridge University Press 1995)

J.F. Donoghue et al.; Dynamics of the Standard Model (Cambridge University Press 1994)

A.V. Manohar, M.B. Wise; Heavy Quark Physics (Cambridge University Press 2007)

P. Ramond, Journeys Beyond The Standard Model (Westview Press 2003)

D.B. Kaplan, Effective Field Theories (arXiv:nucl-th/9506035)

E. Braaten, H.-W. Hammer; Universality in Few-Body Systems with Large Scattering Length (Phys. Rep. 428 (2006) 259)

Module:	Elective Advanced Lectures: Theoretical Physics
----------------	--

Module No.: physics70c

Course:	 Quantum Chromodynamics (T)
----------------	---

Course No.: physics758

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	WT/ST

Requirements for Participation:**Preparation:**

Advanced quantum theory (physics606)

Quantum Field Theory (physics755)

Form of Testing and Examination:

Requirements for the examination (written): successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding basic properties of Quantum Chromodynamics, ability to compute strong interaction processes

Contents of the Course:

Quantum Chromodynamics as a Quantum Field Theory

Perturbative Quantum Chromodynamics

Topological objects: instantons etc.

Large N expansion

Lattice Quantum Chromodynamics

Effective Field Theories of Quantum Chromodynamics

Flavor physics (light and heavy quarks)

Recommended Literature:

S. Weinberg; The Quantum Theory of Fields (Cambridge University Press 1995)

M.E. Peskin, D.V. Schroeder; An Introduction to Quantum Field Theory (Westview Press 1995)

F.J. Yndurain; The Theory of Quark and Gluon Interactions (Springer 2006)

J.F. Donoghue et al.; Dynamics of the Standard Model (Cambridge University Press 1994)

E. Leader and E. Predazzi; An Introduction to Gauge Theories and Modern Particle Physics (Cambridge University Press 1996)

Module:	Elective Advanced Lectures: Theoretical Physics
----------------	--

Module No.: physics70c

Course:  universität**bonn**

**Quantum Field Theory for
Condensed Matter Physics (T)**

Course No.: physics759

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	2+1	5	WT/ST

Requirements for Participation:

Quantum mechanics I (physik421)

Preparation:

Quantum mechanics II (physics606), Thermodynamics and statistical physics (physik521)
Can be heard in parallel to physics617: "Theoretical Condensed Matter Physics"

Form of Testing and Examination:

Requirements for the examination (written or oral): attendance of and successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Knowledge of quantum field theory of interacting many-body systems at finite temperature
Knowledge of quantum field theory for non-equilibrium systems
Ability to construct and evaluate perturbation theory using Feynman diagram

Contents of the Course:

Fock space and occupation number representation for bosons and fermions
Green's functions: analytical properties and their relation to observable quantities
Elementary linear response theory
Equations of motion
Perturbation theory in thermodynamic equilibrium: Feynman diagrams, Matsubara technique
Perturbation theory away from equilibrium: Keldysh technique
Infinite resummations of perturbation expansions
Exemplary application to model system

Recommended Literature:

W. Nolting, Grundkurs Theoretische Physik 7: Vielteilchen-Theorie (Springer, Heidelberg 2009)
A. A. Abrikosov, L. P. Gorkov, I. E. Dzyaloshinskii, Methods of Quantum Field Theory in Statistical Physics (Dover, New York 1975 and later editions)
Xiao-Gang Wen, Quantum Field Theory of Many-Body Systems, Oxford Graduate Texts (Oxford University Press, Oxford 2004)
A. Altland and B. Simons, Condensed Matter Field Theory (Cambridge University Press, Cambridge 2006)

Modules: ECThPhysics **Elective Courses Theoretical Physics**
 physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:  **Computational Physics (T)**

Course No.: physics760

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises and project work	English	2+2+1	7	WT/ST

Requirements for Participation:

Knowledge of a modern programming language (like C, C++)

Preparation:

Theoretical courses at the Bachelor degree level

Form of Testing and Examination:

successful participation in exercises,
 presentation of an independently completed project

Length of Course:

1 semester

Aims of the Course:

ability to apply modern computational methods for solving physics problems

Contents of the Course:

Statistical Models, Likelihood, Bayesian and Bootstrap Methods
 Random Variable Generation
 Stochastic Processes
 Monte-Carlo methods
 Markov-Chain Monte-Carlo

Recommended Literature:

W.H. Press et al.: Numerical Recipes in C (Cambridge University Press)
<http://library.lanl.gov/numerical/index.html>
 C.P. Robert and G. Casella: Monte Carlo Statistical Methods (Springer 2004)

Course:	 Supersymmetry (T)
----------------	--

Course No.: physics761

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	WT/ST

Requirements for Participation:

Quantum Field Theory I

Preparation:

Form of Testing and Examination:

Individual Oral Examinations

Length of Course:

1 semester

Aims of the Course:

Teach the students the basics of supersymmetric field theory and how it can be tested at the LHC.

Contents of the Course:

Superfields; Supersymmetric Lagrangians; MSSM; Testing the MSSM at the LHC

Recommended Literature:

Theory and phenomenology of sparticles: An account of four-dimensional $N=1$ supersymmetry in high energy physics.

M. Drees, (Bonn U.) , R. Godbole, (Bangalore, Indian Inst. Sci.) , P. Roy, (Tata Inst.) . 2004. 555pp. Hackensack, USA: World Scientific (2004) 555 p.

Weak scale supersymmetry: From superfields to scattering events.

H. Baer, (Florida State U.) , X. Tata, (Hawaii U.) . 2006. 537pp.

Cambridge, UK: Univ. Pr. (2006) 537 p.

Course:		Transport in mesoscopic systems (T)
----------------	---	--

Course No.: physics762

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	2+1	5	WT/ST

Requirements for Participation:**Preparation:**

Classical mechanics
 Elementary thermodynamics and statistical physics (physik521)
 Advanced quantum theory (physics606)
 Introductory theoretical condensed matter physics (physics617)

Form of Testing and Examination:

Requirements for the examination (written or oral); successful work with the exercises

Length of Course:

1 semester

Aims of the Course:

Understanding essential transport phenomena in solids and mesoscopic systems
 Acquisition of important methods for treating transport problems

Contents of the Course:

Linear response theory
 Disordered and ballistic systems
 Semiclassical approximation
 Introduction to quantum chaos theory, chaos and integrability in classical and quantum mechanics
 Elements of random matrix theory
 Specific problems of mesoscopic transport (weak localization, universal conductance fluctuations, shot noise, spin-dependent transport, etc.)
 Quantum field theory away from thermodynamic equilibrium

Recommended Literature:

Detailed discussion of computational tools in modern condensed matter theory

Contents of the Course:

Exact Diagonalization (ED)
 Quantum Monte Carlo (QMC)
 (Stochastic) Series expansion (SSE)
 Density Matrix Renormalization (DMRG)
 Dynamical Mean Field theory (DMFT)

Recommended Literature:

will be given in the lecture

Module:	Elective Advanced Lectures: Theoretical Physics
----------------	--

Module No.: physics70c

Course:	 General Relativity for Experimentalists (T)
----------------	--

Course No.: physics768

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	WT/ST

Requirements for Participation:

Preparation:

Theoretische Physik I & II, Analysis I & II

Form of Testing and Examination:

Weekly homework sets (50% required), Final exam

Length of Course:

1 semester

Aims of the Course:

The students shall learn the basics of general relativity and be able to apply it to applications such as experimental tests of GR, GPS, astrophysical objects and simple issues in cosmology.

Contents of the Course:

Review of special relativity
 Curved spacetime of GR
 Experimental tests of GR
 GPS
 Black holes
 Gravitational waves
 Introductory cosmology

Recommended Literature:

GRAVITY, by James Hartle
 A FIRST COURSE IN GENERAL RELATIVITY, by Bernard Schutz
 EXPLORING BLACK HOLES, by Taylor and Wheeler

Module:	Elective Advanced Lectures: Theoretical Physics
----------------	--

Module No.: physics70c

Course:		Lattice QCD (T)
----------------	---	------------------------

Course No.: physics769

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	ST/WT

Requirements for Participation:**Preparation:**

Quantum Mechanics 1+2, Quantum Field Theory 1

Form of Testing and Examination:

Written / oral examination

Length of Course:

1 semester

Aims of the Course:

To give an introduction to the quantum field theory on the lattice

Contents of the Course:

- Introduction: Quantum mechanics on the lattice
- Numerical algorithms
- Spin systems on the lattice: The Ising model
- Scalar field theory on the lattice: Discretization; Perturbation theory; Continuum limit
- Gauge fields: Link variables; Plaquette action; Wilson loop and confinement
- Fermions on the lattice: Fermion doubling; Different formulations for lattice fermions; Axial anomaly; Chiral fermions
- Use of Effective Field Theory methods: Extrapolation in the quark masses; Resonances in a finite volume

Recommended Literature:

J. Smit, Introduction to quantum fields on a lattice: A robust mate, Cambridge Lect. Notes Phys. (2002)

I. Montvay and G. Münster, Quantum Fields on a Lattice, Cambridge Monographs on Mathematical Physics, Cambridge University Press 1994

C. Gatttringer and Ch. Lang, Quantum Chromodynamics on the Lattice: An Introductory Presentation Series: Lecture Notes in Physics, Vol. 788

H.J. Rothe, Lattice Gauge Theories: An Introduction, World Scientific, (2005)

Modules: ECThPhysics **Elective Courses Theoretical Physics**
 physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:  **Advanced Quantum Field Theory (T)**

Course No.: physics7501

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	WT

Requirements for Participation:

Preparation:

3-year theoretical physics course with extended interest in theoretical physics and mathematics

Form of Testing and Examination:

Requirements for the module examination (written examination): successful work with exercises

Length of Course:

1 semester

Aims of the Course:

Introduction to modern methods and developments in Theoretical Physics in regard to current research

Contents of the Course:

Selected Topics in Modern Theoretical Physics for example:

Anomalies

Solitons and Instantons

Quantum Fluids

Bosonization

Renormalization Group

Bethe Ansatz

Elementary Supersymmetry

Gauge Theories and Differential Forms

Applications of Group Theory

Recommended Literature:

M. Nakahara; Geometry, Topology and Physics (Institute of Physics Publishing, London 2nd Ed. 2003)

R. Rajaraman; Solitons and Instantons, An Introduction to Solitons and Instantons in Quantum Field Theory (North Holland Personal Library, Amsterdam 3rd reprint 2003)

A. M. Tsvelik; Quantum Field Theory in Condensed Matter Physics (Cambridge University Press 2nd Ed. 2003)

A. Zee; Quantum Field Theory in a Nutshell (Princeton University Press 2003)

Module:	Elective Advanced Lectures: Theoretical Physics
----------------	--

Module No.: physics70c

Course:	 Random Walks and Diffusion (T)
----------------	---

Course No.: physics7502

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	1+1	3	ST

Requirements for Participation:

Preparation:

Quantum mechanics and Thermodynamics

Form of Testing and Examination:

Requirements for the (written or oral) examination: Successful work within the exercises

Length of Course:

1 semester

Aims of the Course:

The aim of the course is to introduce the student to random processes and their application to diffusion phenomena

Contents of the Course:

Basics of probability theory, Master equation and Langevin equation, Law of large numbers and Central Limit Theorem, First passage problems, Large scale dynamics, Dynamical scaling.

Recommended Literature:

Will be announced in the first lecture

Module:	Elective Advanced Lectures: Theoretical Physics
----------------	--

Module No.: physics70c

Course:	 universität bonn	Selected Topics in Modern Condensed Matter Theory (T)
----------------	--	--

Course No.: physics7503

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+2	7	WT

Requirements for Participation:

Preparation:

- + Introductory Condensed Matter Theory
- + Quantum Mechanics
- + Statistical Physics

Form of Testing and Examination:

oral or written examination

Length of Course:

1 semester

Aims of the Course:

Knowledge of topics of contemporary condensed matter research
 Knowledge of theoretical methods of condensed matter physics

Contents of the Course:

Covers topics and methods of contemporary research, such as

- + Feynman diagram technique
- + Phase transitions and critical phenomena
- + Topological aspects of phenomena in condensed matter physics

Recommended Literature:

R. D. Mattuck, A Guide to Feynman Diagrams in the Many-Body Problem
 N. Goldenfeld, Lectures on Phase Transitions and the Renormalization Group
 B. A. Bernevig, Topological Insulators and Topological Superconductors

The course can be taken in parallel to physics617 Theoretical Condensed Matter Physics.

Module:	Elective Advanced Lectures: Theoretical Physics
----------------	--

Module No.: physics70c

Course:		Theory of Superconductivity and Superfluidity (T)
----------------	---	--

Course No.: physics7504

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	2+1	5	WT/ST

Requirements for Participation:

Preparation:

Quantum Mechanics, Thermodynamics and Statistics, Quantum Field Theory

Form of Testing and Examination:

Requirements for the (written or oral) examination: Successful participation in the exercises

Length of Course:

1 semester

Aims of the Course:

The goal of the course is to introduce students to the theory of superconductivity and superfluidity.

Contents of the Course:

Phenomenological theory of basic superconductivity, type I and type II superconductivity, vortices and their dynamics, Meissner-Ochsenfeld Effekt, microscopic theory of superconductivity: Gor'kov equation, BCS theory, Migdal theorem, strong coupling theory of superconductivity: Eliashberg equation, Andreev scattering, Josephson effect, Anderson theorem: impurity scattering, Collective excitations in superconductors and superfluids, Anderson (Higgs) mechanism for the mass generation. Superfluidity in ^3He , superconductivity in heavy fermion compounds, high temperature superconductivity and open questions.

Recommended Literature:

Will be announced in the first lecture

Modules:

physics70a **Elective Advanced Lectures: Experimental Physics**

physics70b **Elective Advanced Lectures: Applied Physics**

physics70c **Elective Advanced Lectures: Theoretical Physics**

Course:

Internships in the Research Groups

Course No.: physics799

Category	Type	Language	Teaching hours	CP	Semester
Elective	Research Internship	English		4	WT/ST

Requirements for Participation:

Students are asked to contact one of the BCGS lecturers prior to the start of their internship. Lecturers provide help if needed to find a suitable research group and topic. Not all groups may have internships available at all times, thus participation may be limited.

Preparation:

A specialization lecture from the research field in question or equivalent preparation.

Form of Testing and Examination:

A written report or, alternatively, a presentation in a meeting of the research group.

Length of Course:

4-6 weeks

Aims of the Course:

Students conduct their own small research project as a part-time member of one of the research groups in Bonn. The students learn methods of scientific research and apply them to their project.

Contents of the Course:

One of the following possible items:

- setting up a small experiment,
- analyzing data from an existing experiment,
- simulating experimental situations,
- numerical or analytical calculations in a theory group.

Recommended Literature:

provided by the supervisor within the research group.

Module No.: physics70d
 Credit Points (CP): 3-8
 Category: Elective
 Semester: 1.-2.

Module: Elective Advanced Lectures: BCGS Courses

Module Elements:

Nr.	Course Title	Number	CP	Type	Workload	Sem.
1.	Selected courses from catalogue	see catalogue	3-8	see catalogue	90-240 hrs	WT/ST

Requirements for Participation:

none

Form of Examination:

see with the course

Content:

Advanced lectures within the Bonn Cologne Graduate School of Physics and Astronomy (BCGS).

Aims/Skills:

Preparation for Master's Thesis work; broadening of scientific knowledge

Course achievement/Criteria for awarding cp's:

see with the course

Length of Module: 1 or 2 semester

Maximum Number of Participants: ca. 100

Registration Procedure:

s. <https://basis.uni-bonn.de> u. <http://bamawww.physik.uni-bonn.de>

Note: The student must achieve at least 18 CP out of all 4 Elective Advanced Modules

**Module: Elective Advanced Lectures:
BCGS Courses**

Module No.: physics70d

Course:

Relativity and Cosmology I (T)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	4+2	8	WT

Requirements for Participation:

Preparation:

Training in theoretical physics at the B.Sc. level

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

Introduction into Einstein's theory of general relativity and its major applications

Contents of the Course:

Gravity as a manifestation of geometry

Introduction to differential geometry

Einstein field equations

The Schwarzschild solution

Experimental tests

Gravitational waves

Recommended Literature:

T. Padmanabhan, Gravitation: Foundation and Frontiers

J. B. Hartle, Gravity: An introduction to Einstein's general relativity

Module: **Elective Advanced Lectures:**
BCGS Courses

Module No.: physics70d

Course:

Relativity and Cosmology II (T)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	4+2	8	ST

Requirements for Participation:

Preparation:

Training in theoretical physics at the B.Sc. level

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

Application of Einstein's theory of general relativity to black holes and cosmology

Contents of the Course:

Black holes

Introduction to cosmology

The early Universe

Recommended Literature:

V. Mukhanov, Physical Foundations of Cosmology

T. Padmanabhan, Gravitation: Foundation and Frontiers

J. B. Hartle, Gravity: An introduction to Einstein's general relativity

**Module: Elective Advanced Lectures:
BCGS Courses**

Module No.: physics70d

Course:

Quantum Field Theory I (T)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	4+2	8	ST

Requirements for Participation:

Preparation:

Training in theoretical physics at the B.Sc. level

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

Methods of quantum field theory are in use in almost all areas of modern physics. Strongly oriented towards applications, this course offers an introduction based on examples and phenomena taken from the area of solid state physics.

Contents of the Course:

Second quantization and applications
Functional integrals
Perturbation theory
Mean-field methods

Recommended Literature:

A. Altland and B.D. Simons, Condensed Matter Field Theory (Cambridge University Press, Cambridge, second edition: 2010)

**Module: Elective Advanced Lectures:
BCGS Courses**

Module No.: physics70d

Course:

Quantum Field Theory II (T)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	4+2	8	ST

Requirements for Participation:

Preparation:

Quantum Field Theory I

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

Quantum field theory is one of the main tools of modern physics with many applications ranging from high-energy physics to solid state physics. A central topic of this course is the concept of spontaneous symmetry breaking and its relevance for phenomena like superconductivity, magnetism or mass generation in particle physics.

Contents of the Course:

Correlation functions: formalism, and their role as a bridge between theory and experiment
Renormalization
Topological concepts

Recommended Literature:

A. Altland and B.D. Simons, Condensed Matter Field Theory (Cambridge University Press, Cambridge, second edition: 2010)

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:**Geometry in Physics (T)****Course No.:**

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	4+2	8	ST

Requirements for Participation:**Preparation:**

Training in theoretical physics at the B.Sc. level

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

The course introduces the background in differential geometry necessary to understand the geometrically oriented languages of modern theoretical physics. Applications include the coordinate invariant formulation of electrodynamics, phase space and symplectic mechanics, and a brief introduction to the foundations of general relativity.

Contents of the Course:

exterior calculus
manifolds
Lie groups
fibre bundles

Recommended Literature:

M. Göckeler & T. Schücker, Differential geometry, gauge theory, and gravity, Cambridge University Press, 1987.

**Module: Elective Advanced Lectures:
BCGS Courses**

Module No.: physics70d

Course:

Topology for Physicists (T)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	3+1	6	ST

Requirements for Participation:

Preparation:

Bachelor of physics or mathematics; the basics of exterior calculus are assumed

Form of Testing and Examination:

Written or oral examination

Length of Course:

1 semester

Aims of the Course:

This course gives an introduction to various topological concepts and results that play an important role in modern theoretical physics.

Contents of the Course:

Elements of homotopy theory: homeomorphic spaces, homotopic maps, fundamental group, covering spaces, homotopy groups, long exact homotopy sequence of a fibration
 Homology and cohomology: Poincare lemma, Mayer-Vietoris sequence, Cech-deRham complex, Hurewicz isomorphism theorem, spectral sequences
 Vector bundles and characteristic classes: Euler form, Thom isomorphism, Chern classes
 Applications: Berry phase; Dirac monopole problem; visualization of closed differential forms by Poincare duality; cohomology of electrical conductance; supersymmetry and Morse theory; index theorems; homotopy classification of topological insulators

Recommended Literature:

R. Bott and L.W. Tu: Differential forms in algebraic topology (Springer, 1982)
 A.S. Schwarz, Topology for physicists (Springer, 1994)

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:

Nuclear physics II (E)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	3	5	WT

Requirements for Participation:

Preparation:

Nuclear Physics I, Quantum Mechanics

Form of Testing and Examination:

Part of the obligatory courses for area of specialisation Nuclear and Particle Physics, separate oral examination is possible exceptionally.

Length of Course:

1 semester

Aims of the Course:

Study of nuclear reactions, fission and fusion.

Contents of the Course:

- Kinematics in nuclear reactions
- Cross section
- Rutherford scattering
- Scattering in quantum mechanics
- The Born approximation
- Partial wave analysis
- Inelastic scattering, resonances
- Optical model
- Direct, compound, spallation and fragmentation reactions
- Neutron sources and detectors
- Neutron cross sections
- Fission
- Nuclear reactors
- Fusion
- Solar fusion
- Man-made thermonuclear fusion
- Controlled thermonuclear fusion

Recommended Literature:

A script for parts of the course will be distributed during the course.
K.S. Krane, Introductory nuclear physics, chapters 11-14

**Module: Elective Advanced Lectures:
BCGS Courses**

Module No.: physics70d

Course:

Physics of Detectors (E/A)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	3	4	ST

Requirements for Participation:

Preparation:

Nuclear Physics I, Quantum Mechanics

Form of Testing and Examination:

Part of the obligatory courses for area of specialisation Nuclear and Particle Physics, separate oral examination is possible exceptionally.

Length of Course:

1 semester

Aims of the Course:

Study detection methods of experimental techniques in nuclear and particle physics.

Contents of the Course:

- Interaction of electrons and charged heavy particles in matter
- Coherent effects: Cherenkov and transition radiation
- Interaction of gamma-radiation in matter
- Detection of neutral particles: neutrons and neutrinos
- Measurement of 4-momentum in particle physics
- Ionisation detectors: Bragg chamber, avalanche detectors
- Position sensitive detectors: drift chambers, time-projection chamber
- Anorganic and organic scintillators
- Energy detection, calorimeter and shower detectors
- Semiconductor detectors
- Position sensitive Si detectors (strip-, pixel-detectors)
- Ge detectors
- Low background measurements
- Lifetime measurements
- Mössbauer Spectroscopy
- Basic principles of analogue and digital signal processing

Recommended Literature:

A script or slides of the course will be distributed during the course.

R. Leo, Techniques for Nuclear and Particle Physics Experiments

K Kleinknecht, Detektoren für Teilchenstrahlung

G.F. Knoll, Radiation Detection and Measurement

**Module: Elective Advanced Lectures:
BCGS Courses**

Module No.: physics70d

Course:

Particle physics (E)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	3	4	ST

Requirements for Participation:

Preparation:

Quantum Mechanics

Form of Testing and Examination:

Part of the obligatory courses for area of specialisation Nuclear and Particle Physics, separate oral examination is possible exceptionally.

Length of Course:

1 semester

Aims of the Course:

Introduction into particle physics, accelerators and detectors

Contents of the Course:

- Relativistic kinematics
- Interaction of radiation with matter
- Particle accelerators
- Targets and detectors
- Symmetries in particle physics
- QED
- Weak interaction, neutrinos
- Quark model
- QCD
- Standard model
- Cosmology

Recommended Literature:

A script for course will be available on-line

D.H. Perkins: Introduction to High Energy Physics, Cambridge University Press, ISBN 0521621968

H. Frauenfelder, E.M. Henley: Subatomic Physics, Prentice Hall, ISBN 0138594309

----------------	---

Module No.: physics70d

Course:

Groundbreaking experiments in nuclear physics (E)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	ST

Requirements for Participation:**Preparation:**

Basic knowledge in Nuclear Physics

Form of Testing and Examination:

Part of courses for area of specialisation Nuclear and Particle Physics, separate oral examination is possible exceptionally.

Length of Course:

1 semester

Aims of the Course:

Study of original publications of fundamental experiments in nuclear physics. The students should participate actively in the course.

Contents of the Course:

- Discovery of radioactivity
- Rutherford and his many discoveries using alpha sources
- The discovery of the neutron and deuteron
- Determination of magnetic moments
- Hofstadter's electron scattering experiments
- The use of cosmic rays to discover mesons
- Fermi work in neutron physics
- Properties of neutrinos
- Mößbauer effect

Recommended Literature:

Will be distributed during the course.

Module: **Elective Advanced Lectures:**
BCGS Courses

Module No.: physics70d

Course:

Condensed Matter Physics II (E)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	3	4	ST

Requirements for Participation:

Preparation:

Basic knowledge in condensed matter physics and quantum mechanics

Form of Testing and Examination:

Oral examination

Length of Course:

2 semesters

Aims of the Course:

Advanced topics in condensed matter physics with examples of current research.

Contents of the Course:

The entire course (Condensed Matter I & II, given in 2 semesters) covers the following topics:

Crystal structure and binding

Reciprocal space

Lattice dynamics and thermal properties

Electronic structure (free-electron gas, Fermi surface, band structure)

Semiconductors and metals

Transport properties

Dielectric function and screening

Superconductivity

Magnetism

Recommended Literature:

Skriptum (available during the course)

Ashcroft/Mermin: Solid State Physics

Kittel: Introduction to Solid State Physics

Ibach/Lüth: Festkörperphysik

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:

Semiconductor Physics and Nanoscience (E/A)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	ST

Requirements for Participation:**Preparation:**

Basic knowledge in condensed matter physics

Form of Testing and Examination:

No examination

Length of Course:

1 semester

Aims of the Course:

Understanding of theoretical and experimental concepts of semiconductor physics, nanotechnology as well as aspects of future information technology.

Knowledge of basic fields and important applications of information technology.

Contents of the Course:

Semiconducting material and nanostructures represent the backbone of modern electronics and information technology. At the same time they are fundamental to the research of problems of modern solid state physics, information technology and biophysics. This lecture will provide an introduction to semiconductor physics and its applications.

Topics covered are

introduction to semiconductor physics, crystalline structure, band structure, electronic and optical properties,

heterostructures, junction and interfaces,

basic semiconductor device concepts,

up to date techniques and strategies of information technology ranging from nowadays preparation technologies and nanoscience to concepts of molecular electronic and bioelectronics.

Recommended Literature:

Skriptum (available during the course)

Bergmann/Schäfer, Experimentalphysik (Band 6: Festkörper)

Ibach/Lüth, Festkörperphysik

**Module: Elective Advanced Lectures:
BCGS Courses**

Module No.: physics70d

Course:

Superconductivity (E/A)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	ST

Requirements for Participation:

Preparation:

Basic knowledge in condensed matter physics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Understanding of the fundamental aspects of superconductivity.

Contents of the Course:

The lecture provides an overview of the fundamental aspects of superconductivity, theoretical description and technological applications, including the following topics:

Basic experimental facts and critical parameters

Phenomenological description: London equations

Ginzburg-Landau theory

Magnetic flux quantization

Type I and type II superconductors, characteristic length scales, vortices

Microscopic description: BSC theory

Electron-phonon interaction, Cooper pairs

Josephson effects

Applications of superconductivity in science, transport, and medicine

Brief introduction to unconventional superconductivity with recent examples

Recommended Literature:

J. F. Annett: Superconductivity, Superfluids and Condensates (2004)

M. Tinkham: Introduction to Superconductivity (1996)

V. V. Schmidt: The Physics of Superconductors (1997)

J. R. Waldram: Superconductivity of Metals and Cuprates (1996)

D. R. Tilley and J. Tilley: Superfluidity and Superconductivity (1990)

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:**Magnetism (E/A)****Course No.:**

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	WT

Requirements for Participation:**Preparation:**

Basic knowledge in condensed matter physics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Understanding of magnetism in condensed matter systems

Contents of the Course:

The lecture introduces to the magnetism in condensed matter systems. Starting from basic concepts of the magnetic properties of free atoms it is aimed to illustrate the extremely rich field of collective magnetism that arises from the mutual interaction of an extremely large number of interacting particles.

Topics covered are

Magnetism of free atoms

Magnetism of ions in the crystal electric field

Magnetic interactions and ordering phenomena

Magnetic ground states and excitations

Itinerant magnetism

Magnetic frustration and low dimensionality

Magnetic order vs. competing ordering phenomena

Recommended Literature:

Skriptum (available during the course)

S. Blundell, Magnetism in Condensed Matter

Ashcroft/Mermin, Solid State Physics

Kittel, Festkörperphysik

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:

Experimental methods in condensed matter physics (E/A)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	WT

Requirements for Participation:**Preparation:**

Basic knowledge in condensed matter physics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Understanding of experimental concepts in condensed matter science

Knowledge of basic fields and important applications

Contents of the Course:

The lecture introduces to modern experimental approaches in solid state physics. Basic concepts are illustrated with examples of physical problems investigated employing different methods.

Topics covered are

Introduction on sample preparation

X-ray powder diffraction

Specific heat, Thermal expansion

Magnetization and magnetic susceptibility

DC-Transport

Dielectric spectroscopy

Photo-emission spectroscopy

Inelastic scattering (neutrons, light)

THz spectroscopy / Optical spectroscopy

Scanning probe microscopy/spectroscopy (AFM, STM)

Recommended Literature:

Skriptum (available during the course)

Bergmann/Schäfer, Experimentalphysik (Band 6: Festkörper)

Ibach/Lüth, Festkörperphysik

Ashcroft/Mermin, solid state physics

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:

Physics of Surfaces and Nanostructures (E/A)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	WT

Requirements for Participation:**Preparation:**

Basic knowledge of solid state physics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Understanding of fundamental concepts in surface and nanostructure science

Knowledge of basic fields and important applications

Contents of the Course:

The lecture introduces to modern topics of surface and nanostructure physics. Basic concepts are illustrated with examples and the link to technical applications is emphasized. Topics covered are

- surface structure and defects,
- adsorption and heterogeneous catalysis,
- surface thermodynamics and energetics
- surface electronic structure and quantum dots,
- magnetism at surfaces
- epitaxy and thin film processes,
- oxide films
- ion beam processes at surfaces,
- clusters,
- graphene

Recommended Literature:

Michely: Skriptum (available during the course)

H. Ibach: Physics of Surfaces and Interfaces (Springer, Berlin 2006)

K. Oura et al: Surface Science - an introduction (Springer, Berlin 2003)

M. Prutton: Introduction to Surface Physics (Oxford University Press, 1994)

H. Lüth: Solid Surfaces, Interfaces and Thin Films, (Springer, Berlin 2001)

M. Henzler/ W. Göpel: Oberflächenphysik des Festkörpers (Teubner, Stuttgart 1994)

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:

Introduction to neutron scattering (E/A)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	ST

Requirements for Participation:**Preparation:**

Basic knowledge in condensed matter physics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Understanding of the basic concepts and techniques of elastic and inelastic neutron scattering experiments.

Contents of the Course:

The lecture introduces to the techniques of elastic and inelastic neutron scattering that can be used to determine the crystal or magnetic structure as well as the dispersion of nuclear or magnetic excitations.

Topics covered are

Crystal structures and reciprocal space

Neutron powder diffraction

Single-crystal diffraction

Structure refinements

Inelastic neutron scattering

Phonon dispersion

Magnetic excitations

Examples of current research (high-temperature superconductors, manganates with colossal magnetoresistivity, multiferroics)

Polarized neutron scattering

Recommended Literature:

Skriptum (available during the course)

S. W. Lovesey, Theory of Neutron Scattering from Condensed Matter, Oxford (1981)

G. E. Bacon, Neutron Diffraction, Oxford (1979)

Shirane, Shapiro and, Tranquada, Neutr. Scattering with a triple-axis spectrometer, Cambridge (2002)

Izyumov, Ozerov, Magnetic Neutron Diffraction Plenum (1970)

Marshall and Lovesey, Theory of thermal neutron scattering, Oxford (1971)

Squires, Introduction to the theory of Thermal Neutron scattering, Cambridge (1978)

Course:**Optical Spectroscopy (E/A)****Course No.:**

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	3	WT/ST

Requirements for Participation:**Preparation:**

Basic knowledge in condensed matter physics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Understanding of the basic concepts and techniques of optical spectroscopy on solid-state samples.

Contents of the Course:

Topics covered are:

Electromagnetic waves in matter, dielectric function

Electromagnetic response of metals and insulators, Drude-Lorentz model

Kramers-Kronig relations

THz spectroscopy (time domain and cw)

Fourier-transform spectroscopy

Ellipsometry

Examples of current research (phonons, magnons, orbital excitations, superconductors, ...)

Recommended Literature:

Skriptum (available during the course)

Dressel/Grüner: Electrodynamics of Solids: Optical Properties of Electrons in Matter (Cambridge, 2002)

Klingshirn: Semiconductor Optics (Springer, 1997)

Kuzmany: Solid-State Spectroscopy: An Introduction (Springer, 2009)

Requirements for Participation:

Preparation:

Atomic Physics, Molecular Physics and Quantum Mechanics at the level of the bachelor courses in physics, Molecular Physics I

Form of Testing and Examination:

Oral Examination

Length of Course:

1 semester

Aims of the Course:

The lecture introduces to astrochemistry of various astrophysical environments. Fundamental processes, such as molecular collisions, fragmentations, and chemical reactions, are explained, and implications for astrophysical observations by means of high resolution spectroscopy are treated.

Contents of the Course:

- Detection of Molecules in Space
- Elementary Chemical Processes
- Chemical Networks
- Grain Formation (Condensation)
- Properties of Grains and Ice
- Grain Chemistry
- Diffuse Clouds, Shocks, Dark Clouds, Star Forming Regions

Recommended Literature:

- A. Tielens "The Physics and Chemistry of the Interstellar Medium" Cambridge University Press, 2005
 S. Kwok "Physics and Chemistry of the Interstellar Medium" University Science Books, 2006
 D. Rehder "Chemistry in Space, From Interstellar Matter to the Origin of Life" Wiley-VCH, Weinheim, 2010
 J. Lequeux "The interstellar Medium" Springer, 2004
 A. Shaw "Astrochemistry" Wiley, 2006
 D. Whittet "Dust in the Galactic Environment", Taylor and Francis, 2nd edition, 2002

Module: **Elective Advanced Lectures:**
BCGS Courses

Module No.: physics70d

Course:

**Fundamentals of Molecular
Symmetry (E/A/T)**

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	2	4	ST

Requirements for Participation:

Preparation:

Basic knowledge of quantum mechanics

Form of Testing and Examination:

Oral Examination

Length of Course:

1 semester

Aims of the Course:

Understanding the fundamental concepts of representation theory and its application to describe the symmetry of molecules

Contents of the Course:

The lecture introduces to group theory with special emphasis on representations and their use to describe the symmetry of molecules in high-resolution spectroscopy and in molecular physics generally. The theory is accompanied by a series of "prototypical" examples Topics covered are

- symmetry in general and symmetry of a molecule.
- groups and point groups.
- irreducible representations, characters.
- vanishing integral rule
- the Complete Nuclear Permutation-Inversion (CNPI) group.
- the Molecular Symmetry (MS) group).
- the molecular point group.
- classification of molecular states: electronic, vibrational, rotational, and nuclear spin states
- nuclear spin statistical weights
- hyperfine structure
- non-rigid molecules (inversion, internal rotation)

Recommended Literature:

Jensen: Script (text of powerpoint presentation files; available during the course)

P. Jensen and P. R. Bunker: The Symmetry of Molecules, in: "Encyclopedia of Chemical Physics and Physical Chemistry" (J. H. Moore and N. D. Spencer, Eds.), IOP Publishing, Bristol, 2001.

P. R. Bunker and Per Jensen: "Molecular Symmetry and Spectroscopy, 2nd Edition," NRC Research Press, Ottawa, 1998 (ISBN 0-660-17519-3).

P. R. Bunker and P. Jensen: "Fundamentals of Molecular Symmetry", IOP Publishing, Bristol, 2004 (ISBN 0-7503-0941-5).

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:**Physical biology (T/A)****Course No.:**

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	4+2	8	ST

Requirements for Participation:**Preparation:**

Advanced statistical mechanics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Acquaintance with basic concepts of molecular and evolutionary biology; understanding of statistical issues arising in the analysis of sequence data and the application of methods from statistical physics addressing them.

Contents of the Course:

Statistics of the genome
 Sequence analysis and sequence alignment
 Evolutionary theory and population genetics
 Theory of bio-molecular networks

Recommended Literature:

J.H. Gillespie, Population Genetics: A concise guide (Johns Hopkins University Press, 2004)
 R. Durbin, S.R. Eddy, A. Krogh, G. Mitchison, Biological Sequence Analysis: Probabilistic Models of Proteins and Nucleic Acids (Cambridge University Press, 1998)
 F. Kepes, Biological Networks (World Scientific, Singapore 2007)
 D.J. Wilkinson, Stochastic Modelling for Systems Biology (Chapman&Hall, 2006)

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:

Statistical physics of soft matter and biomolecules (T/A)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	4+2	8	ST

Requirements for Participation:**Preparation:**

Advanced statistical mechanics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Understanding the molecular structure and mesoscopic properties of various types of soft matter systems, in particular with regard to their role in living cells.

Contents of the Course:

Colloids, polymers and amphiphiles
 Biopolymers and proteins
 Membranes
 Physics of the cell

Recommended Literature:

J. K. G. Dhont, *An Introduction to Dynamics of Colloids* (Elsevier, Amsterdam, 1996).
 M. Doi and S. F. Edwards, *The Theory of Polymer Dynamics* (Clarendon Press, Oxford, 1986).
 S. A. Safran, *Statistical Thermodynamics of Surfaces, Interfaces, and Membranes* (Addison-Wesley, Reading, MA, 1994).
 G. Gompper, U. B. Kaupp, J. K. G. Dhont, D. Richter, and R. G. Winkler, eds., *Physics meets Biology — From Soft Matter to Cell Biology*, vol. 19 of *Matter and Materials* (FZ Jülich, Jülich, 2004).
 D. H. Boal, *Mechanics of the Cell* (Cambridge University Press, Cambridge, 2002).

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:

Statistical physics far from equilibrium (T)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	4+2	8	ST

Requirements for Participation:**Preparation:**

Advanced statistical mechanics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Understanding the generic behavior of fluctuation-dominated systems far from equilibrium, and acquaintance with the basic mathematical tools used for their description.

Contents of the Course:

Stochastic methods

Transport processes

Scale-invariant growth

Pattern formation far from equilibrium

Recommended Literature:

P.L. Krapivsky, S. Redner and E. Ben-Naim: A kinetic view of statistical physics (Cambridge University Press, 2010)

M. Kardar, Statistical Physics of Fields (Cambridge University Press, 2007)

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:**Disordered systems (T)****Course No.:**

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	4+2	8	ST

Requirements for Participation:**Preparation:**

Advanced statistical mechanics

Form of Testing and Examination:

Oral examination

Length of Course:

1 semester

Aims of the Course:

Understanding the novel types of behaviour that arise in systems with quenched disorder, as well as the specific mathematical challenges associated with their theoretical description.

Contents of the Course:

Disorder average
 Replica methods
 Percolation
 Phase transitions in disordered systems
 Localization
 Glassy dynamics

Recommended Literature:

D. Stauffer and A. Aharony, Introduction to Percolation Theory (Taylor & Francis, London 1994)
 K.H. Fischer and J.A. Hertz, Spin Glasses (Cambridge University Press, Cambridge 1991)
 K. Binder and W. Kob, Glassy Materials and Disordered Solids (World Scientific, Singapore 2005)
 T. Nattermann, lecture notes

**Module: Elective Advanced Lectures:
BCGS Courses**

Module No.: physics70d

Course:

**Nonequilibrium physics with
interdisciplinary applications (T)**

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture with exercises	English	2+1	4	ST

Requirements for Participation:

Preparation:

Statistical mechanics

Form of Testing and Examination:

Oral examination or term paper

Length of Course:

1 semester

Aims of the Course:

Acquaintance with basic concepts of nonequilibrium physics; ability to apply the basic methods for the investigation of nonequilibrium problems; application of physics-based models to interdisciplinary problems.

Contents of the Course:

Principles of nonequilibrium physics

Stochastic systems and their description (master equation, Fokker-Planck equation,..)

Analytical and numerical methods

Nonequilibrium phase transitions

Applications to traffic, pedestrian dynamics, economic systems, biology, pattern formation,..

Recommended Literature:

A. Schadschneider, D. Chowdhury, K. Nishinari: Stochastic Transport in Complex Systems (Elsevier, 2010)

P.L. Krapivsky, S. Redner, E. Ben-Naim: A Kinetic View of Statistical Physics (Cambridge University Press, 2010)

V. Privman (Ed.): Nonequilibrium Statistical Mechanics in One Dimension (Cambridge University Press, 1997)

N.G.Van Kampen: Stochastic Processes in Physics and Chemistry (Elsevier, 1992)

Module:	Elective Advanced Lectures: BCGS Courses
----------------	---

Module No.: physics70d

Course:

Probability theory and stochastic processes for physicists (T)

Course No.:

Category	Type	Language	Teaching hours	CP	Semester
Elective	Lecture	English	3	4	WT

Requirements for Participation:**Preparation:**

Statistical mechanics on the bachelor level

Form of Testing and Examination:

Oral examination or term paper

Length of Course:

1 semester

Aims of the Course:

Acquaintance with probabilistic concepts and stochastic methods commonly used in the theory of disordered systems and nonequilibrium phenomena, as well as in interdisciplinary applications of statistical physics.

Contents of the Course:

Limit laws and extremal statistics
 Point processes
 Markov chains and birth-death processes
 Stochastic differential equations and path integrals
 Large deviations and rare events

Recommended Literature:

D. Sornette: Critical Phenomena in Natural Sciences (Springer, 2004)
 N.G.Van Kampen: Stochastic Processes in Physics and Chemistry (Elsevier, 1992)

Module No.: physics910
 Credit Points (CP): 15
 Category: Required
 Semester: 3.

Module: Scientific Exploration of the Master Thesis Topic

Module Elements:

Nr.	Course Title	Number	CP	Type	Workload	Sem.
1.	Scientific Exploration of the Master Thesis Topic	physics911	15		450 hrs	WT

Requirements for Participation:

Successful completion of 60 credit points from the first year of the Master phase, including 7 cp from the Module physics601, 7 cp from the Elective Course Theoretical Physics and 24 cp from the Specialization Modules

Form of Examination:

Presentation

Content:

Under guidance of the supervisor of the Master Thesis topic, the student shall explore the science field, read the relevant recent literature, and perhaps participate in further specialised classes and in seminars. The student shall write an essay about the acquired knowledge, which may serve as the introduction part of the M.Sc. Thesis

Aims/Skills:

The student shall demonstrate to have understood the scientific question to be studied in the Master Thesis

Course achievement/Criteria for awarding cp's:

none

Length of Module: 1 semester

Maximum Number of Participants: ca. 100

Registration Procedure:

s. <https://basis.uni-bonn.de> u. <http://bamawww.physik.uni-bonn.de>

Module No.: physics920
 Credit Points (CP): 15
 Category: Required
 Semester: 3.

Module: Methods and Project Planning

Module Elements:

Nr.	Course Title	Number	CP	Type	Workload	Sem.
1.	Methods and Project Planning	physics921	15		450 hrs	WT

Requirements for Participation:

Successful completion of 60 credit points from the first year of the Master phase, including 7 cp from the Module physics601, 7 cp from the Elective Course Theoretical Physics and 24 cp from the Specialization Modules

Form of Examination:

Written proposal

Content:

Under guidance of the supervisor of the planned Master Thesis topic, the student shall acquire knowledge about the methods required to carry out the Master Thesis project. This may include the participation in specialised seminars or specialised classes for the master programme. The student shall plan the steps needed to successfully complete the Master Thesis

Aims/Skills:

The student shall demonstrate to have understood the methods to be used in the Master Thesis research. The project plan has to be presented

Course achievement/Criteria for awarding cp's:

none

Length of Module: 1 semester

Maximum Number of Participants: ca. 100

Registration Procedure:

s. <https://basis.uni-bonn.de> u. <http://bamawww.physik.uni-bonn.de>

Module No.: physics930
 Credit Points (CP): 30
 Category: Required
 Semester: 4.

Module: Master Thesis

Module Elements:

Nr.	Course Title	Number	CP	Type	Workload	Sem.
1.	Master Thesis	physics931	30		900 hrs	ST

Requirements for Participation:

Successful completion of 60 credit points from the first year of the Master phase, including 7 cp from the Module physics601, 7 cp from the Elective Course Theoretical Physics and 24 cp from the Specialization Modules

Form of Examination:

Master Thesis

Content:

Under guidance of the supervisor of the Master Thesis topic, the student shall carry out the research of the Master Thesis project

Aims/Skills:

The student shall demonstrate to be able to do research

Course achievement/Criteria for awarding cp's:

Oral presentation

Length of Module: 1 semester

Maximum Number of Participants: ca. 100

Registration Procedure:

s. <https://basis.uni-bonn.de> u. <http://bamawww.physik.uni-bonn.de>
